

APPENDIX F

FIRST QUARTER 2011 REASONABLE POTENTIAL  
ANALYSIS (RPA) SUMMARY TABLES

**FIRST QUARTER 2011 REASONABLE POTENTIAL ANALYSIS SUMMARY**  
**THE BOEING COMPANY**  
**SANTA SUSANA FIELD LABORATORY**  
**NPDES PERMIT CA0001309**

1. The following Reasonable Potential Analysis (RPA) provides the analytical results as performed by the procedures outlined in *Reasonable Potential Analysis Methodology Technical Memo* (MWH and Flow Science, 2006).
2. The monitoring data set utilized to conduct the RPA consists of all applicable and relevant data from August 2004 through the present reporting quarter.
3. As directed by the CTR and the Regional Water Control Board 2,3,7,8-TCDD (Dioxin) values are to be expressed in NPDES permitting and this RPA as TCDD Total Equivalence units (TEQs). A TCDD TEQ is determined by multiplying each of the seventeen dioxin and furan congeners by their respective total equivalence factor (TEF), and summing the results of those products. For the purposes of this RPA, the resulting TCDD TEQ does not include those congener concentrations that are reported as DNQ, as specified on Page 53, of the NPDES Permit Effective June 29, 2009.
4. In calculating the average, standard deviation, coefficient of variation, and projected maximum effluent concentration (99/99), one-half of the MDL was used for concentration results reported as ND. Data reported with qualifiers were not included in this RPA as Boeing believes qualified data are not "appropriate, valid, relevant, (nor) representative"<sup>1</sup> of storm water constituents and are therefore not utilized in its RPA.
5. All of the following abbreviations and/or notes may not occur on every table.

---

**Definition of Acronyms, Abbreviations, and Terminology Used**

|                     |                                                                                                                                                                                                                                         |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| >=                  | Greater than or equal to                                                                                                                                                                                                                |
| *                   | Freshwater aquatic life criteria for metals are expressed as a function of total hardness (mg/L) in the water body. The equations are provided in the CTR, (US EPA, 2000). Values displayed correspond to a total hardness of 100 mg/l. |
| µg/L                | Concentration units, micrograms per liter                                                                                                                                                                                               |
| All Data Qualified  | All available monitoring data are qualified and no statistical analysis is performed.                                                                                                                                                   |
| Annually            | The 2009 NPDES Permit requires annual monitoring.                                                                                                                                                                                       |
| Available Data < DL | All available monitoring data that are not qualified are below detection limits.                                                                                                                                                        |
| B                   | Background                                                                                                                                                                                                                              |
| C                   | Concentration                                                                                                                                                                                                                           |
| CCC                 | Criterion Continuous Concentration                                                                                                                                                                                                      |
| CMC                 | Criterion Maximum Concentration                                                                                                                                                                                                         |
| CTR                 | California Toxics Rule                                                                                                                                                                                                                  |
| CV                  | Coefficient of Variation                                                                                                                                                                                                                |
| DL                  | Detection Limit                                                                                                                                                                                                                         |
| EPA TSD             | EPA's Technical Support Document for Water Quality Based Toxics Control, (see references).                                                                                                                                              |

| HH W&O             | Human Health criteria for consumption of Water and Organisms                                                                                                                                                                                                                                                                                                                                   |
| MEC                | Maximum Observed Effluent Concentration                                                                                                                                                                                                                                                                                                                                                        |
| Min                | Minimum                                                                                                                                                                                                                                                                                                                                                                                        |
| NA                 | Not Applicable                                                                                                                                                                                                                                                                                                                                                                                 |
| Narrative          | Water quality criteria are expressed as a narrative objective rather than a numeric objective, and therefore are not part of the statistical RPA calculations.                                                                                                                                                                                                                                 |
| None               | No available CTR or Basin Plan criteria.                                                                                                                                                                                                                                                                                                                                                       |
| pH Dependent       | CTR Criteria are based on pH.                                                                                                                                                                                                                                                                                                                                                                  |
| Once Per Discharge | The 2009 NPDES Permit requires monitoring once per discharge event.                                                                                                                                                                                                                                                                                                                            |
| Qualified Data     | Data qualifier definitions are: (a) J- The reported result is an estimate. The value is less than the minimum calibration level but greater than the estimated detection limit (EDL), (b) U/UJ- The analyte was not detected in the sample at the detection limit /estimated detection limit (EDL), (c) B- Analyte found in sample and associated blank, and (d) DNQ- Detected Not Quantified. |
| Reserved           | EPA has reserved the CTR criteria.                                                                                                                                                                                                                                                                                                                                                             |
| RPA                | Reasonable Potential Analysis                                                                                                                                                                                                                                                                                                                                                                  |

**NPDES PERMIT CA0001309**

|                     |                                                                                                                                                  |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| C = Lowest Criteria | The comparison concentration (C) is equal to the lowest criterion for a constituent based on the CMC, CCC, HH O, and Basin Plan Criteria listed. |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|

**Priority Pollutant RPA Column Explanation (Continued)**

|                                                                                 |                                                                                                                                                                                                                |
|---------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Step 2 defines the applicable data set.</i>                                  |                                                                                                                                                                                                                |
| Is Effluent Data Available                                                      | If there is available monitoring data that is not qualified and above DL, then YES. If not, then NO.                                                                                                           |
| <i>Step 3 determines the maximum observed effluent concentration.</i>           |                                                                                                                                                                                                                |
| Was Constituent Detected in Effluent Data                                       | If the constituent was detected, then YES. If all monitoring data are non-detect or qualified then NO.                                                                                                         |
| Are all DL > C                                                                  | If constituent was detected in effluent data then not applicable (NA). If constituent was not detected and all analysis detection limits are less than the comparison concentration, then YES, if not then NO. |
| If DL > C MEC = Min (DL)                                                        | If the previous cell answer was yes, then the MEC is equal to the minimum detection limit. If not, then NA.                                                                                                    |
| <i>Step 4 compares the MEC to the lowest applicable water quality criteria.</i> |                                                                                                                                                                                                                |
| MEC >= C                                                                        | If the MEC is greater than or equal to the comparison concentration then YES, if not then NO.                                                                                                                  |

Note: Steps 5 and 6 of the Priority Pollutant RPA do not apply to Boeing SSFL because the Regional Board gives no consideration for receiving water background constituent concentrations. Furthermore, Boeing SSFL defers the application of best professional judgment in Step 7 and final determination of reasonable potential in Step 8 to the Regional Board Staff.

**Nonpriority Pollutant RPA Column Explanation**

|                                                 |                                                                                                                                                                       |
|-------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Constituent                                     | Provides the Non Priority Pollutant constituent common name                                                                                                           |
| Monitoring                                      | Provides the 2009 NPDES Permit directed monitoring frequency                                                                                                          |
| Units                                           | Provides the data set's concentration units as referenced by 2009 NPDES Permit                                                                                        |
| Number of Samples                               | Provides the number of available samples that are not qualified                                                                                                       |
| MEC                                             | Provides the outfall monitoring group's maximum value from the applicable data set                                                                                    |
| CV                                              | Equal to the standard deviation divided by the average of the applicable data set. If the number of samples is less than 10, the CV is assumed to be 0.6.             |
| Multiplier                                      | Utilizes the EPA's TSD calculation to determine multiplier for which the maximum effluent concentration is calculated. (MWH and Flow Science, 2006, or EPA TSD, 1991) |
| Projected Maximum Effluent Concentration        | Utilizes the product of the multiplier and the MEC as an estimate for the projected maximum effluent concentration.                                                   |
| Dilution Ratio                                  | The Regional Board allocates no dilution ratio to Boeing SSFL.                                                                                                        |
| Background Concentration                        | The Regional Board allocates no background concentration to Boeing SSFL.                                                                                              |
| Projected Maximum Receiving Water Concentration | The Regional Board estimates the projected maximum receiving water concentration as equal to the projected maximum effluent concentration.                            |
