Component Exchange

MINIMIZE REPAIR AND INVENTORY COSTS

A BETTER WAY TO MANAGE REPAIRS AND INVENTORY.

With our Component Exchange Programs, you minimize component repair and inventory costs, and no longer need to worry about repair runtime.

Boeing holds hundreds of replacement components, which are tested and overhauled to standards set by the original equipment manufacturer and are ready to ship within 24 hours of your order. This means you can trim inventory, which reduces holding costs and lets you put the capital

to better use. Our programs also provide a single point of contact for components and handle inventory maintenance and warranties thereby simplifying administration.

Reduce repair costs of line-replaceable units. Component Exchange Programs offer a ready supply of dispatch-critical units manufactured by Boeing and Boeing suppliers, including the high-value components that typically account for a large part of spares expense. At no additional charge to you, Boeing manages the repair, testing, and recertification of these units – reducing your costs.

Minimize service time. By taking advantage of our next-day shipping, you don't need to worry about how long it takes to repair a unit. With Component Exchange Programs, a replacement can be en route to your site before the damaged unit is even removed from the airplane, and you are no longer forced to cover lengthy repair turntimes with in-stock inventory.

Simplify supplier administration. Component Exchange Programs serve as a single point of contact for dozens of original equipment manufacturers, reducing your administrative burden for warranties, service, and deliveries. Your parts will be automatically shipped from the service center that provides the quickest response. As the programs expand, we will add new centers to serve you.

Additional benefits.

■ *Fleet modification.*

Our programs bear the cost of incorporating selected configuration changes, which minimizes the chance that you will stock outdated parts.

Program parts will be upgraded as necessary with the latest modifications.

■ *Absolute airworthiness.*

Boeing guarantees that every part meets the specifications and performance standards of the original manufacturer and is certified by regulatory agencies.
