

MATERIALS OPTIMIZATION

Component Repair and Leasing Service

LIFECYCLE
SOLUTIONS

COMPONENT REPAIR AND LEASING SERVICES

Boeing delivers LIFECYCLE SOLUTIONS that are focused on improving your materials optimization through one-time incident repairs or regular overhauls on your Boeing airplane. You can rely on the support of the Boeing worldwide network.

We provide outstanding service to help our customers streamline repairs and overhauls while minimizing costs and keeping their fleet operational. In addition, the Boeing warranty guarantees that you get the quality that you've come to expect from the Boeing name.

COMPONENT REPAIR MANAGEMENT OPTIONS

Fast, reliable OEM repairs.

We make all repairs using original equipment manufacturer (OEM) parts, either at a Boeing facility or at one of our global network of MRO partners. When you choose Boeing,

you have access to Boeing expertise, data, and product knowledge. We know your airplane thoroughly, and we're committed to working in partnership with you to fully support your airplane for as long as you operate it.

Leasing programs keep you flying.

As part of a total component management solution, Boeing also provides you with access to many lease and exchange options designed to meet your business and operational needs.

During component repair and overhaul, you keep your airplane in service and avoid tying up capital in your own spares by leasing components from Boeing. We'll work with you to analyze what leasing or exchange program is best for your needs.

Quick, cost-effective component lease exchanges.

Boeing also maintains "rotatable" component pools. When repair or overhaul is required, you exchange your part with a fully reconditioned part from our inventory and fly away with minimum time on the ground. Flexible leasing and exchange programs include components such as landing gear doors, thrust reversers, winglets, flight control surfaces, and lease and insurance parts.

Single point of contact.

From the first realization that you need to pull and repair or overhaul a component part, Boeing works with you every step of the way.

We maintain a contracted maintenance provider base of more than 600 suppliers, providing a complete component solution for your Boeing aircraft. In many cases, the component OEM is providing the maintenance. Maintenance certifications include FAA, European Aviation Safety Administration, and Bermuda Department of Civil Aviation.

We also act as a single point of contact for suppliers and handle all logistics and administrative details, including third-party warranties, reducing costly planning and paperwork.
