COMPREHENSIVE AIRPLANE TRANSITION SUPPORT

GAIN CRUCIAL UNDERSTANDING OF AIRPLANE HISTORY, STATUS, AND CONDITION

Transitioning an airplane to or from storage, between operators, or to a new owner requires specialized knowledge and procedures

that few airplane owners can afford to retain in house.

Boeing RAMS evaluation experts will assemble the detailed information you need to make decisions and negotiate confidently. A thorough understanding of outstanding airplane updates, maintenance, and repair requirements

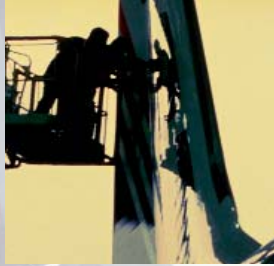

will save you time and money in preparing an airplane for transition.

Boeing can coordinate or manage any indicated maintenance activities and help you obtain airworthiness certification.

Get visibility of airplane physical condition and maintenance requirements.

Boeing evaluation and maintenance experts analyze the airplane's current airframe and engine maintenance status and identify outstanding issues related to lease or purchase requirements, aviation regulations, and operational and navigational capabilities.

Boeing will detail the results of the physical and records evaluation in a report and, upon request, forecast future maintenance events for a period that you specify.

You will receive your evaluation report in both paper and electronic formats. Continental Data Graphics, a Boeing company, organizes and produces electronic versions on your choice of CD-ROM or DVD.

■ **Records Evaluation—**

In addition to the current airframe and engine maintenance status, we'll report on the status of important maintenance categories, such as AD compliance, phase check level, CPCP, and SI tasks. At your request, we will also report on the aircraft's precise operations and navigation capabilities with respect to ETOPS, RVSM, Category III, RNP, and FAR 121 and JAR-OPS 1 compliance.

■ **Physical Evaluation—**

You'll get the full picture of the airplane's overall condition, including an inventory of installed avionics and equipment, cross-checked against airplane maintenance records. We'll document any damage and repairs to verify that maintenance actions and records comply with regulatory requirements.

Onsite advisors can guide you through the most efficient maintenance and repair procedures.

We can station advisers at your work site to help you perform any and all phases of maintenance and repair. We'll help you troubleshoot issues, then identify and order necessary parts, materials, and specialized tooling. You'll enjoy the full expertise and knowledge base of the original aircraft manufacturer in planning and implementing maintenance activities.

Maintenance management services give you project oversight and control anywhere in the world.

Boeing will serve as your on-site representative for aircraft maintenance events, anywhere in the world. Your Boeing representative will monitor activities, negotiate schedule, monitor costs during the maintenance visit, and work with Boeing Service Engineering to resolve immediate aircraft problems. We'll coordinate arrangements between owner, operator, and third-party maintenance providers. Working with Boeing Maintenance Engineering, we'll facilitate maintenance program transition between operators.

Rely on Boeing for authoritative engineering and support.

With Boeing Evaluation and Maintenance Services, you'll obtain valuable insights that will enable you to avoid unnecessary costs, make informed decisions, value your assets confidently, and negotiate from a position of strength.
