

FLEET ENHANCEMENTS PRODUCTS AND SERVICES DIRECTORY

Airframe, Propulsion, and Systems Upgrades. Airplane flight manual revisions, increased gross weight capability, engine rate and derate analysis, and engine and airplane maintenance analysis.

Avionics Upgrades. Includes the engineering, design, parts and integrated manuals, as well as postinstallation customer support.

Cabin Interior Solutions. Solutions for every aspect of the cabin interior, from innovative architecture to creation of a new fleet image.

Engineering Design and Installation. Service bulletin incorporation, master change kits, and fleet standardization requirements.

Freighter Conversions. Passenger- and combi-to-freighter conversions for McDonnell Douglas and Boeing products; global suppliers team with Boeing to perform the conversion work.

In-Flight Entertainment Integration. Integration of in-flight entertainment retrofit products, supporting fleet commonality, testing, installation, certification, and program management.

ModEvaluator. Expert help incorporating service bulletins, airworthiness directives, aging airplane upgrades and structural, interior, or systems modifications.

Modification Services. Expert help incorporating service bulletins; airworthiness directives; aging airplane upgrades; and structural, interior, or systems modifications.

747 Enhanced Main Deck. Featuring blended main cabin ceilings and center stowbins; softer, smoother-contoured surfaces that help reduce shadowing and provide a more open feeling in the cabin, resulting in an interior similar to the modern, graceful lines of the 777 interior.

767 Enhanced Interior. A similar look and feel to the 767-400; features new ceiling panels, centerline bins, and new outboard bin doors.

Tooling Services. A multimillion-dollar inventory of tooling, ranging from perishable tools to sophisticated electronic test equipment; also provides customers and their contract repair agencies with tooling on a lease or rental basis.
