MAXIMIZE RELIABILITY AND PERFORMANCE

EXPERT INTEGRATION OF COMPLEX SYSTEMS THAT ONLY AN OEM CAN DO.

When properly integrated, in-flight systems can create strong passenger loyalty and revenue for you. As the original airframe manufacturer, we have

the expertise and access to original data to successfully integrate and troubleshoot complex IFE systems and peripherals, including cabin services management systems, no matter what supplier or system. Our unparalleled industry knowledge as an OEM and willingness to listen to your needs

will result in getting the maximum benefit from your systems.

We make complex systems work.

From the inception of IFE, our dedicated engineers have integrated, tested, and certified these complex systems. Our immediate access to proprietary data from the original airplane design makes changes that much easier. We have world-class program and project management experience and excellent relations with suppliers. This directly benefits you in the thoroughness of installation and integration and unequalled support, including worldwide spares and logistics.

We can serve as

technical consultants . . .

Let us be your partner in planning and installing the IFE system that is right for your airline.

Our engineering, project management, and modification specialists can assist you with everything from evaluating and testing to certifying the systems you select. We can also manage suppliers of those systems, including peripherals, seat, and galley suppliers, to ensure they understand your requirements.

On-site support is available both to you and your suppliers.

. . . or we can act as your general contractor.

If you prefer, we can manage all aspects of the project from developing your unique IFE systems through certification, return of the airplane to service, and in-service support, freeing you to do what you do best – operate an airline that wins passenger loyalty.

We offer a complete line of innovative, high-technology products and services.

Based on your individual needs, our products and services range from a single critical skill or task to the greater complexity of a full-scale project. Our products and services meet the highest Boeing quality standards, and we back our work with Boeing quality assurances, the best in the industry.

- Design and integration of both fiber optics and copper-based, high-speed networks.
- Airplane integration.
- System integration.
- Total program management.
- Seats with installed IFE.
- Purser workstations.
- Video control centers.
- Telephones.
