PARTS THAT FLY ... VALUE THAT GROWS

IMPROVED PROCESSES FOR BETTER MATERIALS MANAGEMENT.

We know that keeping your fleet in the air is essential to your success, and we're dedicated to improving our processes to serve you better.

From our state-of-the-art parts distribution center in Seattle to our improved PART Page, we strive to make every step of materials management easier, faster, and more cost effective. At Boeing Spares, we're listening to your requests – and responding to them.

Easy access to information and data.

Through MyBoeingFleet.com, we provide the comprehensive information that you need to keep your operation running smoothly. You have ready access to engineering-approved data for spares provisioning, and parts interchangeability and substitutions, and you can get technical support for an airplane on ground (AOG). The site also gives you access to our award-winning PART Page, which makes ordering parts easier than ever before.

Simplified procurement.

Boeing's PART Page is the most comprehensive web-based ordering system in the industry, and we've incorporated customer suggestions to make it easier than ever to place an order or track its status. The site provides up-to-the-minute information on millions of parts,

including price and availability, and lets you order several parts at once. Or if you prefer the personal touch, representatives are available around the clock. Either way, our advanced ordering system helps you keep your airplanes flying, and our next-day shipping helps lower your inventory holding costs.

Personalized provisioning for new airplanes.

When you order a new airplane from Boeing, we help you develop a comprehensive spare parts list suited to your aircraft. We recommend a list of replaceable spare parts based on the airplane's specific requirements and develop a customized provisioning schedule so that you receive parts just as your maintenance plan requires them.

Specialized kits for in-service airplanes.

For your in-service fleet, we offer a variety of kits to enhance their value.

■ *Service bulletin kits* improve the operational abilities of your airplanes and help you comply with modifications required by regulatory agencies.

■ *Landing gear buildup and installation kits* are customized to your specifications and simplify installation.

■ *Quick engine change (QEC) kits* allow your mechanics to perform buildups on spare engines. Or, we'll even have our specialists build up the engine for you.

Reduce inventory holding costs.

We can help you minimize inventory holding costs without jeopardizing your flight and maintenance schedules. Based on your actual use of spares, we'll work with you to develop whatever level of materials management you want. In our most comprehensive program, Global Airline Inventory NetworkSM – GAIN – we supply a wide range of expendable parts directly to the maintenance operations of major customers, which reduces their inventory holding costs.

If you want a less comprehensive arrangement, we will customize an inventory replacement program tailored to your needs.

Deliveries directly to your site.

We operate the most extensive commercial airplane spare parts distribution network in the world. Eight centers, located strategically around the world, minimize your shipping costs and reduce the time you have to wait for parts. In partnership with UPS (Boeing Direct) and FedEx (Boeing Express), we can also deliver parts anywhere in the world. You designate where you want the parts delivered. We do the rest.

Better access to surplus spare parts.

In cooperation with Volvo Aero Services, we provide unprecedented access to surplus Boeing parts for all our airplane models. Through our innovative program, you can select from a list of more than 300,000 line items and from a range of overhauled and serviceable parts, as well.

Worldwide AOG support.

If unanticipated events put one of your airplanes out of service, we're ready to respond. Within two hours of an airplane-on-ground (AOG) order, we will ship the necessary parts

wherever they are needed. We coordinate with AOG teams to get your airplane back into service as quickly as possible, where it can generate revenue for you.
