

## **WHERE TO BEGIN?**

On April 4, 1998 there was a conference call with representatives from Boeing, MITRE-CAASD and myself. Because ADS-B is such a vast topic to perform a cost vs benefit analysis, it was mutually agreed upon to have a starting point from which a model could be built, and further applications later applied. We chose:

### **Terminal Operations in Reduced Visibility - Parallel Approaches**

With this topic in mind, we are asking for input from all ADS-B C/AFT Members. If you have a bibliography, study, presentation or any relevant information on this topic, please forward it to Kathleen Pirotte at Boeing. Also, I invite you to please send a list of potential ADS-B applications. The deadline for this material is March 14, 1998

On April 2, 1998 there will be a Core C/AFT Group Meeting in Washington at the Boeing facility. On April 3, 1998 there will be an ADS-B Focus Group meeting to be held at the same location. This will be a one-day meeting, and your presence is requested. Please forward your name to Kathleen in order that we have a list of all planned attendees.

I look forward to meeting all of you,

Claudia R. Gerstle
