

Through experience and expertise Boeing provides synchronized, integrated and responsive end-to-end Cyber Solutions

#### Synchronized

- Cyber planning, rehearsal and mission services provided through the defensive, exploit and operations continuum

#### Integrated

- Common operational awareness through a cohesive suite of interactive tools support defense-in-depth, analysis and exploitation, and cyber operations

#### Responsive

- Rapid system and software prototype, design and production environment agile for proactive response

## ROBUST CYBER DEFENSE

Drawing on extensive expertise with Cyber Solutions, Boeing offers highly-effective defense-in-depth solutions. We design, integrate and operate cyber defense systems on Department of Defense and Department of Homeland Security platforms, as well as operate and protect one of the world's largest Virtual Private Networks. In addition, our rapid hardware and software technology insertion labs and testing environments provide agile platforms to respond rapidly to new and emerging threats.

## ENHANCED DATA EXPLOITATION

By utilizing Boeing's Cyber Command and Control (Cyber C2) system, analysts have enhanced visibility through global situational awareness across networked environments. Using a common operational view, Boeing provides data mining and analyst support tools that improve understanding, enable decision quality information, and increase analyst productivity.

## COMPREHENSIVE CYBER OPERATIONS

The Boeing Cyber Command and Control (Cyber C2) system integrates real-time global situational awareness, defense, and exploitation while providing a platform for the continuum of cyber operations.

Tool suites support the continuum of cyber operations from defense to active protection capabilities. These information sharing technologies focus on protecting our critical infrastructure networks and U.S. Government systems. Our customers have access to the right technology, tools and experience to effectively dominate the cyber domain. Boeing Cyber Solutions programs and services include:

- Defense-in-depth architecture designs for multiple systems
- Situational awareness environment
- Mission planning and operations tools
- Mission assurance simulation
- Rapid software, hardware and transition development through the Network Operation Center laboratory
