Apply Your Degree to Boeing IT

	Responsibilities	Preferred Majors	Available Sites*
Information Security	• Evaluates computing & information security risks • Provides consultation, policy development & audit support	Information Systems, Computer Science, Informatics, Information Security/Risk Analysis	Seattle Area, St. Louis
Systems/Data Analyst	• Researches processes, applications, systems & data • Consults with customers to clarify & refine requirements • Translates requirements into functional specs • Develops and executes tests	Information Systems, Technology Management, Human Centered Design & Engineering, Informatics	All Sites
User Experience Specialist	• Conducts user research • Creates design alternatives and builds prototypes • Diagnoses issues and recommends changes	Human Centered Design & Engineering, Informatics	Seattle Area, St. Louis
Computing Architect	• Defines requirements, designs, architecture, data & information management systems and components • Incorporates architecture functions into lifecycle • Develops and maintains architecture views and models	Computer Science, Information Management	All Sites
Network Designer	• Researches, creates, deploys, documents network designs • Performs network maintenance and restoration • Coordinates high level implementation planning	Information Systems, Network Comm	All Sites
Functional Analyst	• Document & analyze requirements • Manage customer relations • Perform functionality testing	Information Systems, Technology Management, Human Centered Design & Engineering, Informatics	All Sites

Apply Your Degree to Boeing IT

	Responsibilities	Preferred Majors	Available Sites*
Systems Design & Integration Specialist	• Apply design principles between systems • Participate in design and implementation of common systems and processes	Information Systems, Computer Science, Engineering, Human Centered Design & Engineering, Informatics	All Sites
Project Management	• Develop project schedules & budgets • Master project management tools and software methodologies	Information Systems, Technology Management, Informatics, Information Management	All Sites
Programmer Analyst / Application Development	• Design, develop, test & implement applications • Documents and maintains computing applications • Integrates application software, database and delivery subsystems	Computer Science, Engineering, Informatics	All Sites
Configuration Management	• Increase knowledge of system lifecycle management • Apply knowledge processes for software, processes, and documents	All business IS, Computer Science, Informatics	Seattle Area, St. Louis, Charleston
Versatile Technologist	• Analyzes computing requirements and system needs • Work with system hardware, software and components • Ensures systems meet architecture and performance standards	Information Systems, Network Comm., Informatics	All Sites
Database Administrator	• Designs, develops & maintains databases • Develops and implements database security & correct problems	Information Systems	All Sites
