## Flight Documents

# Boeing Rebuilder

Boeing Rebuilder is an Adobe FrameMaker® plug-in that assists airlines in managing their FrameMaker documents by increasing accuracy and automation while reducing the cost of revising flight operations documents in structured FrameMaker.

---

Boeing Rebuilder plug-in adds additional features to the FrameMaker menus to provide revision management options:

- Revision Initialization removes old revision highlights and revision bars and sets the airline-selected publication date
- Assists authors in creating new revision highlights and revision bars
- Post-process feature compares the current airline revision to the previously published documents to accurately draw revision bars and assign new page dates on changed content
- Compares with past revisions and draws revision bars as needed
- Switches between color and grayscale illustrations
- Rebuilds the List of Effective Pages (LEP)
- Rebuilds each Table of Contents (TOC)
- Rebuilds the revision highlights section
- Rebuilds the indexes
- Creates a PDF file of changed pages only

### Requirements

Airlines must be on distribution for at least one flight document in order to be eligible to receive Boeing Rebuilder. Additionally, a signed user agreement is required before the software can be distributed to the airline.

### Training

Boeing Rebuilder software training is available in Seattle at no cost.

### Price

Boeing Rebuilder is available at no cost to airlines that receive their flight operations documents in FrameMaker format.
