Information Technology

Airline operations stand to benefit from rapid technology changes onboard aircraft, at the gate, and in data centers. Information Technology (IT) departments have joined forces with the avionics and engineering departments to provide secure end-to-end solutions. The Boeing team of business consultants have thorough understanding of emerging technologies and the expertise in IT, avionics, engineering, and information security to accelerate airline growth through strategic technology initiatives.

Leveraging information technology solutions to drive business results

The Information Technology practice offers the following consulting services:

Information Security

- Aviation information security assessments
- Fleet information security programs
- Cyber disruption management

Mobility

- Paperless flight deck solutions
- Mobile-enabled efficiency solutions
- Airline mobile ecosystem

E-enabling

- System strategy and design
- Business process optimization
- Connectivity and testing solutions

System Integration

- Large-scale integration solutions
- Vendor-neutral service designs
- Cloud computing solutions

IT Solutions

- Infrastructure optimization
