
**ISRA 009, Area II
AP/STP-1B, -1C-1, -1C-2 and -1E-2
Soil Sampling for Radionuclides
Waste Certification**

Introduction

This data package provides the laboratory results of the 54 samples taken at the AP/STP site in Area II during 2010, and 35 samples taken at the AP/STP site during 2011. Soil sample locations are shown in Appendix 1. Soil sample results were compared to the preliminary USEPA radiological trigger levels (RTLs) in order to determine if soil exceeds background as required for the NASA/DTSC Administrative Order on Consent (AOC)¹.

Methodology

Samples taken for waste disposal characterization were analyzed for strontium-90, tritium and gamma emitting radionuclides by gamma spectroscopy, using an off-site laboratory². Minimum detectable concentrations (MDC) for cesium-137 and strontium-90 averaged ~0.043 pCi/g and ~0.047 pCi/g respectively. Minimum detectable concentration for tritium averaged ~0.77 pCi/g. The gamma spectroscopy library also included the following contaminants-of-concern: Na-22, K-40, Mn-54, Co-60, Cs-134, Eu-152, Eu-154, Th-228, Th-232, U-235, U-238 and Am-241.

NASA and DTSC have signed an AOC that requires soils on Area II and portions of Area I to be cleaned up to background³. The USEPA has characterized local radionuclide background⁴ in soil and has published preliminary radiological trigger levels (RTL) based on the higher of background threshold values (BTW) or minimum detectable concentrations (MDC)⁵.

On August 23, 2012, DTSC sent NASA a letter regarding excavation of ISRA soil⁶. In the letter, DTSC stated,

¹ "Administrative Order on Consent for Remedial Action (AOC)", December 6, 2010, signed by the National Aeronautics and Space Administration (NASA) and the Department of Toxic Substances Control (DTSC).

²Boeing, "ISRA Soil Management Plan", Attachment A, "ISRA Sampling for Radionuclides", July 2009.

³ Page 5, Section 2.1 of the AOC states, "*The cleanup of soils at the Site [Area II and portions of Area I] shall result in the end state of the Site after cleanup to be consistent with "background." That is, at the completion of the cleanup, no contaminants shall remain in the soil above local background levels, with the exception of the exercise of the exemptions that are specifically expressed in the AIP. All response actions taken pursuant to this Order shall be performed so as to accomplish this objective, in full compliance with the terms and conditions detailed in the AIP, and in accordance with workplans that have been submitted to and approved by DTSC. Similarly, to the extent any radiological materials are determined to be present at this portion of the Site, the cleanup of soils at the Site contaminated with radiological materials shall result in no radiological contaminants remaining in the soil above local background levels, with the exception of the exercise of the same exemptions expressed in the AIP.*"

⁴ USEPA, "Final Radiological Background Study Report, Santa Susana Field Laboratory, Ventura County, California", October 2011.

⁵ USEPA, "Technical Memorandum, Radiological Trigger Levels, Santa Susana Field Laboratory Site, Area IV Radiological Study", December 12, 2011.

⁶ DTSC, "Management and Disposal of Radionuclide-impacted Soil Excavated for Interim Source Removal Actions on NASA Property, Santa Susana Field Laboratory, Ventura County, California", August 23, 2012

"DTSC agrees with using the December 2011 USEPA RTLs for all radionuclides as the values for disposal of the ISRA soils. DTSC has concluded that use of the RTLs will not be inconsistent with SSFL radiological Lookup Table values."

"ISRA radiological soil sample results that exceed the RTLs and that have not been re-sampled may be re-sampled to evaluate the initial RTL exceedance. Soil at locations characterized by initial and re-sample radiological results exceeding their respective RTLs will be removed and disposed of at a LLRW disposal facility, per Section 2.10 of the AOC."

"Validated radiological sample concentrations below the sample MDC can be treated as "non-detects" and the associated soil is not subject to the Section 2.10, AOC soil disposal conditions."

Results

Appendix 2 shows the soil radionuclide data for the samples taken at AP/STP, including re-sampling where initial results exceeded RTLs. Only location APWC0030, in AP/STP-1C-1, exceeded the uranium-238 RTL in both original and resample analysis (see page 8 of Appendix 2). This location is fenced and excluded from the current AP/STP excavation. All other results were either non-detect (less than MDC) and/or less than the RTL in either the original analyses or in re-sampled analyses.

Conclusions

Location APWC0030 in AP/STP-1C-1 exceeded the uranium-238 RTL and is therefore subject to the requirements of Section 2.10 of the AOC. Therefore, this location will be excavated at a later date.

Excavated soil from all other locations in AP/STP-1C-1, and all locations in AP/STP-1B, AP/STP-1C-2 and AP/STP-1E-2 is released for disposal with no radiological restrictions.

December 2011 Trigger Levels

Cs-137 = 0.207 pCi/g
 U-235 = 0.151 pCi/g
 U-238 = 1.80 pCi/g

- Resampling necessary because initial result is non-detect, however, the detection limit is above the trigger level.
- Resampling necessary to confirm the initial radionuclide result that met or exceeded the trigger level.
- Resampling confirmed the initial radionuclide result that met or exceeded the trigger level.
