Revenue Recognition Accounting Standard ASC 606 Information

The revenue recognition accounting standard (ASC 606) among other things, imposes additional criteria for recognizing contracted backlog with customers beyond the existence of a contract to deliver. Certain ASC 606 adjustments are updated monthly while other adjustments are updated quarterly. As such, aircraft identified for a specific customer on the orders and deliveries website may not necessarily contribute to the totals for backlog and/or other amounts included in our financial statements. The figures in the table for Total Unfilled Orders, ASC 606 Adjustment and Backlog include the orders of BCA Customer Finance.
