EDWARDS AFB

IN 14 MINUTES, IT TRANSFORMED THE FUTURE.

On May 22, 2002, the X-45A Unmanned Combat Air Vehicle demonstrator successfully completed its first flight. More than a milestone for the DARPA/USAF/Boeing UCAV team, it was a critical step towards validating the transformational potential of unmanned combat systems. A transformation that will mean aircrews will no longer have to be put at risk to complete the most dangerous of missions. In other words, a more secure future for our country and the brave men and women who serve.

A critical milestone in Boeing's unmanned air vehicle program is captured in this ad about the first flight of the X-45A. This accomplishment provided Boeing the opportunity to build awareness of its leadership position in this growing market as well as illustrate the potential of unmanned combat systems.
