simNAV

Support and Services

FLIGHT OPERATIONS SOLUTIONS
The Boeing simulated Navigation Control Panel (simNAV) hardware panel provides a reliable, cost-effective solution for your Flight Simulator Training Device (FSTD).

Boeing Flight Services offers a “plug-and-play” simulated Navigation Control Panel for FSTDs, utilizing the same connectivity as in the aircraft. Additionally, simNAV includes a USB connection for added flexibility in lower level devices and has an optional Ethernet interface. The simNAV functions the same as an aircraft unit with no discernible difference to an operator in the flight deck.

**Features**
- Replicates Gables Engineering Inc. part number G7500-03.
- Aircraft connector for plug-and-play installation.
- Three interface options: aircraft connector, USB, or Ethernet.
- Two year warranty.

**Value**
- Reduced cost solution versus aircraft component.
- Cost effective option for spares inventory.

**Airplane models**
- 737-600/-700/-800/-900
- 737 MAX

**Price**
