C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

As a leading global aerospace company, Boeing develops, manufactures and services commercial airplanes, defense products and space systems for customers in over 150 countries. As a top U.S. exporter, the company leverages the talents of a global supplier base to advance economic opportunity, sustainability and community impact. Boeing's diverse team is committed to innovating for the future; leading with sustainability; and cultivating a culture based on the company’s core values of safety, quality and integrity.

C0.2

</thead>
<tbody>
<tr>
<td>Board-level committee</td>
<td>The Governance &amp; Public Policy Committee of the Board of Directors is responsible for climate-related issues. As set forth in its charter, the Governance &amp; Public Policy Committee's responsibilities include: • Review and monitor the Company's practices relating to public policy and corporate sustainability, including matters related to environmental stewardship, climate change, diversity, equity, and inclusion, philanthropic programs and community engagement; and, where appropriate, make recommendations to the Board with respect to such practices. • Review and monitor the Company's political advocacy activities and expenditures and, where appropriate, make recommendations to the Board with respect to such activities and expenditures. • Review developments and trends in corporate governance, political advocacy, and sustainability and, where appropriate, make recommendations to the Board regarding responses to such proposals. In addition, Boeing has a dedicated Global Enterprise Sustainability organization. The Chief Sustainability Officer, who is a member of the Company's Executive Council, reports directly to the CEO. The Chief Sustainability Officer meets at least twice a year with the Governance &amp; Public Policy Committee. In 2022, the Board, based on a recommendation of the Governance &amp; Public Policy Committee recommended the adoption of a shareholder proposal requesting a report on the Net Zero Indicator (which is defined as the Climate Action 100+ Benchmark’s Indicator 1). This proposal was approved during the 2022 Annual Meeting of Shareholders and Boeing’s 2022 Sustainability Report includes the following areas: Risk Management, Product Safety, Diversity and Inclusion, Climate Change.</td>
</tr>
</tbody>
</table>
(C1.1d) Does your organization have at least one board member with competence on climate-related issues?

<table>

<td>All Board members have skills &amp; experience with Risk Management and the experience assessing and managing risks enables directors to effectively oversee and mitigate the most significant risks facing Boeing. In addition, Boeing's current Board includes: a board member with a background in clean energy development, renewable energy, and carbon sequestration and a board member who served in a senior leadership role on environmental, safety and health matters with the U.S. Navy. Our Board's Governance &amp; Public Policy Committee is responsible for identifying and assessing potential board candidates and recommending nominees for the Board's approval. In this process, the Committee assesses the qualifications of nominees on an ongoing basis, including with respect to sustainability. The Committee reviews annually the skills and characteristics required of directors in light of the Board's current composition, evolving business requirements, and the long-term interests of the Company and its shareholders. This assessment includes consideration of experience in areas that are relevant to Boeing's global activities, such as engineering, manufacturing, risk management, public policy, sustainability, among other factors. Although we do not currently call out climate-related expertise in our directors' biographies explicitly, any experience in sustainability, including specific competence with respect to climate-related issues, would be considered in our overall assessment of a director nominee.</td>
<td>&lt;Not Applicable&gt;</td>

(C1.2a) Describe where in the organizational structure this/these position(s) and/or committees lie, what their associated responsibilities are, and how climate-related issues are monitored (do not include the names of individuals).

Boeing has a dedicated Global Enterprise Sustainability organization, led by the Chief Sustainability Office (CSO), who is a member of the Executive Committee and reports directly to the Chief Executive Officer (CEO). The CSO leads the Global Sustainability Council, which is composed of global leaders from across business units and functions to advance sustainability objectives and strategy. The Global Sustainability Council has a number of sub-councils focused on specific cross-functional issues, including: policy, sustainability and enterprise services, technology and future mobility, customers, sustainable aviation fuel, and finance and governance.

It is the responsibility of the Board and senior management to ensure that we avoid imprudent risks and mitigate the many strategic, technological, operational, and compliance risks we face, all with our core values of safety, quality, integrity and sustainability at the forefront. Strategic and compliance risks related to sustainability, and climate change, are monitored, addressed and managed at the Global Enterprise Sustainability organizational level. These strategic and compliance risks are also discussed at the enterprise level with the Chief Compliance Officer and annually to the Board of Directors and the Audit Committee of the Board.

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?

Long-term

Description of process
As part of Boeing’s enterprise risk management (ERM) processes, we assess risks, issues and opportunities at both the company level and the asset level to determine potential impacts to the business and subsequently incorporate any potential financial impacts into our standard business planning, and opportunity and risk management processes. To assess risks, issues, and opportunity opportunities, Boeing employs a rigorous risk analysis framework that takes into account the likelihood of each risk and opportunity as well as the consequence of the manifestation of a given risk, issue, or opportunity. Risk registers are built in coordination with subject matter experts and executive leadership at every level, in every function. Risks which are deemed to be sufficiently likely and consequential are regularly elevated and analyzed for Board-level discussion. Other risks are managed at the appropriate management levels, based on their potential consequence to the business and their likelihood of occurrence. These processes are the same at both the company and asset levels. While risk, issue, and opportunity approach is part of the standard business operations throughout programs and sites on an on-going basis, there are also annual Board of Director reviews of top-level, strategic operational and compliance risks. Compliance related risks are also managed by the company’s Compliance Risk Management Board (CRMB). The CRMB is co-led by the Controller and Chief Compliance Officer. The CRMB includes senior leaders representing all businesses and functions, with processes embedded in businesses and functions. The CRMB drives integration and simplification. The CRMB’s charter is to collaborate to create a proactive culture of compliance; integrate compliance risk management across the enterprise; drive effective and efficient compliance controls to achieve business objectives; and lead compliance risk mitigation and transparency. Where Boeing’s CRMB deals primarily with compliance risks, the Enterprise Risk Management (ERM) program serves to surface significant operational and strategic risks to Boeing corporate leadership. The ERM is led out of the Controller’s office within Boeing; on a regular basis, risk registers are updated and reviewed by a community of subject matter experts and executive leaders representing every function and business unit throughout the company. These risks are then presented for in-depth discussion with: the Chief Executive Officer, Chief Financial Officer, and Board of Directors Audit Committee each spring as well as the Board of Directors each summer. The ERM process employs a risk and control framework for managing the company’s risks, which include climate-related risks. Risks to Boeing and our supporting supply chain are evaluated and managed based on both asset cost and impact to our customers, inclusive of facilities and equipment. Extensive planning is conducted across the enterprise, with consideration of disruption to key operating facilities. Risks and opportunities associated with the environment and climate change are subject to our standard opportunity and risk and governance processes. As stated in our Corporate Governance Principles, the Board has general oversight responsibilities for: reviewing the long-range business plans of the Company and monitoring performance relative to achievement of those plans; advising management regarding long-range strategic issues and risks facing the Company; and overseeing management in the execution of its risk management responsibilities and assessing the Company’s overall approach to risk management. Environmental and climate change related risks are included in these processes when appropriate and as identified by the programs and businesses in standard risk identification processes. In 2021 the Global Enterprise Sustainability function elevated environmental and climate change related risks to the enterprise level. The risks identified through these processes are shared with the Global Sustainability Council, which reviews progress with the Executive Council twice yearly. It is the responsibility of the Board and senior management to ensure that we avoid imprudent risks and mitigate the many strategic, technological, operational, and compliance risks we face, all with our core values of safety, quality, and integrity at the forefront. Senior management is responsible for day-to-day management of risk, including the creation of appropriate risk management policies and procedures. The Board is responsible for overseeing management in the execution of its risk management responsibilities and for assessing the company’s approach to risk management. The Board regularly assesses significant risks to the company in the course of reviews of corporate strategy and the development of our long-range business plan, including significant development programs. As part of its responsibilities, the Board and its standing committees also regularly review strategic, operational, financial, compensation, and compliance risks with senior management.

C2.2a

(C2.2a) Which risk types are considered in your organization's climate-related risk assessments?

<table>
<thead>
<tr>
<th>Relevance &amp; Inclusion</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current regulation</td>
<td>Relevant, always included</td>
</tr>
<tr>
<td></td>
<td>The scope of environmental concerns, and regulations addressing those concerns affecting the aerospace industry, is increasing and the topics include GHG emissions. Non-compliance with regulations could result in fines and operation interruption. There are currently aircraft fuel standards in effect outside of the United States. The standards will apply to new aircraft type designs from 2020, and to aircraft type designs already in production as of 2003. Those in production aircraft which by 2028 do not meet the standard will no longer be able to be produced unless their designs are sufficiently modified or unless there are other mitigation measures. In addition, the United States has issued an updated Aviation Climate Action Plan to achieve net zero emissions by 2050. The US government's strategy includes pursuing ambitious CO2 standards for airplanes and engines. We are subject to the US Environmental Protection Agency mandatory GHG reporting rule, and other various US federal, state, local and non-US laws and regulations relating to environmental protection. We continually assess our compliance status and management of environmental matters to ensure that our operations are in compliance with all applicable environmental regulations. Investigation, remediation, and operation and maintenance costs associated with environmental compliance and management of sites are a normal, recurring part of our business to mitigate risk. As part of Boeing's ERM and CRMB processes, we assess climate change related risks and opportunities at both the company level and the asset level to determine potential impacts to the business, and subsequently incorporate any potential financial impacts into our standard business planning, and opportunity and risk management processes. These processes are the same at both the company and at asset levels. While opportunity and risk management is part of standard business operations throughout programs and sites from a daily management perspective, there are also annual Board reviews of top-level, strategic operational and compliance risks. Both the Audit Committee and full Board regularly address and review all key risks of the business, and climate change related and other environmental risks are among the topics explicitly covered. In addition, environmental and climate change related risks identified are shared with the Global Sustainability Council, which reviews progress with the Executive Council twice yearly.</td>
</tr>
</tbody>
</table>

CDP
(C2.3) Have you identified any inherent climate-related risks with the potential to have a substantive financial or strategic impact on your business?

Yes

Emerging regulation

Relevant, always included

It is reasonably possible that costs incurred to ensure continued environmental compliance could impact operations, financial condition or cash flows if additional operational or remedial improvements are imposed by regulating authorities. For example, if our emissions are regulated under a carbon pricing regime, increased carbon costs could impact our operations. In addition, climate change could increase cost to our operations in those states. Therefore, Boeing is acting at its operating sites across the United States to reduce energy consumption and increase our use of renewable energy to mitigate these risks. Boeing supports the goals of the Paris Climate Agreement. The U.S. re-commitment is important for addressing this global challenge. Of equal importance is the context of using multi-lateral forums to address climate change, is the International Civil Aviation Organization (ICAO) and its aircraft CO2 emissions standard, which was adopted in 2010. There are currently aircraft fuel standards in effect outside of the United States. These standards are consistent with the ICAO standards that have been adopted in the United States, and we look forward to working with the U.S. government to ensure Boeing aircraft are certified under this standard. In addition, various national governments and ICAO proceedings indicate that there is potential for additional aircraft emissions restrictions (e.g., for CO2, non-volatile particulate matter, nitrogen oxides, etc.). As part of Boeing’s ERM processes, we assess climate change related risks and opportunities at both the company level and the asset level to determine potential impacts to the business and subsequently incorporate any potential financial impacts into our standard business planning, and opportunity and risk management processes. These processes are the same at both the company and asset levels. While opportunity and risk management is part of standard business operations, opportunities and risks are identified through these processes are shared with the Global Sustainability Council which reviews progress with the Executive Council twice yearly.

Technology

Relevant, always included

To decarbonize aviation, we are focused on four key areas: fleet renewal, network operational efficiency, renewable energy transition and advanced technology, such as the Transonic Transport-Birding Concept, electric propulsion, and hydrogen. We see governments playing a key role in technological advancement of sustainable aviation fuel (SAF). De-risking project capital for pioneer and early-stage facilities is also crucial for ensuring that more SAF technologies reach commercial scale. As a technology and innovation leader, Boeing invests in Design for Environment, a systems engineering approach to improve the environmental performance of our products, services and operations. The goal of this approach is to reduce the risks and impacts on the environment associated with our business at both the company level and the asset level. In addition, Boeing is also focusing on emerging technologies that can be used to decarbonize aviation, including the use of hydrogen as a fuel.

Legal

Relevant, always included

Just as we continually assess emerging regulations, we also monitor emerging legal theories that could lead to climate-related litigation claims. At the present time we do not deem such litigation risk to be relevant because we do not believe that there are meaningful legal bases for such claims against Boeing. As part of Boeing’s ERM processes, we assess climate change related risks and opportunities at both the company level and the asset level to determine potential impacts to the business and subsequently incorporate any potential financial impacts into our standard business planning, and opportunity and risk management processes. These processes are the same at both the company and asset levels. While opportunity and risk management is part of standard business operations and tourism programs and sites from a daily management perspective, there are also annual Board reviews of top-level, strategic, operational and compliance risks. Both the Audit Committee and full Board regularly address and review all key risks of the business, and climate change related and other environmental risks are among the topics explicitly covered. In addition, environmental and climate change related risks identified through these processes are shared with the Global Sustainability Council which reviews progress with the Executive Council twice yearly.

Market

Relevant, always included

Climate-related market risks could include the costs of raw materials, insurance, and capital as well as customer and consumer behavior. One example of a market risk is for raw materials. We rely on other companies, including U.S. and non-U.S. subcontractors and suppliers, to provide and produce raw materials, integrated components and sub-assemblies, and production commoditites and to perform some of the services that we provide to our customers. If one or more of our suppliers or subcontractors experiences financial difficulties, delivery delays or other performance problems, we may be unable to meet commitments to our customers or incur additional costs. In addition, if one or more of the raw materials on which we depend (such as aluminum, titanium or composites) becomes unavailable to us or our suppliers, or is available only at very high prices, we may be unable to deliver one or more of our products in a timely fashion or at acceptable costs. Any service disruption from one of these suppliers, either due to circumstances beyond the supplier’s control, such as geopolitical developments, or as a result of performance problems or financial difficulties, could have a material adverse effect on our ability to meet commitments to our customers or increase our operating costs. As part of Boeing’s ERM processes, we assess climate change related risks and opportunities at both the company level and the asset level to determine potential impacts to the business and subsequently incorporate any potential financial impacts into our standard business planning, and opportunity and risk management processes. These processes are the same at both the company and asset levels. While opportunity and risk management is part of standard business operations throughout programs and sites from a daily management perspective, there are also annual Board reviews of top-level, strategic, operational and compliance risks. Both the Audit Committee and full Board regularly address and review all key risks of the business, and climate change related and other environmental risks are among the topics explicitly covered. In addition, environmental and climate change related risks identified through these processes are shared with the Global Sustainability Council which reviews progress with the Executive Council twice yearly.

Reputation

Relevant, always included

From time to time, in alignment with our sustainability priorities, we establish and publish publicly announce and commitments to improve our environmental performance, such as our recent operational goals in areas of GHG emissions, energy, water and waste. If we fail to achieve or improperly report on our progress toward our environmental goals and commitments, the resulting negative publicity could adversely affect our reputation and/or our access to capital. As part of Boeing’s ERM processes, we assess climate change related risks and opportunities at both the company level and the asset level to determine potential impacts to the business and subsequently incorporate any potential financial impacts into our standard business planning, and opportunity and risk management processes. These processes are the same at both the company and asset levels. While opportunity and risk management is part of standard business operations throughout programs and sites from a daily management perspective, there are also annual Board reviews of top-level, strategic, operational and compliance risks. Both the Audit Committee and full Board regularly address and review all key risks of the business, and climate change related and other environmental risks are among the topics explicitly covered. In addition, environmental and climate change related risks identified through these processes are shared with the Global Sustainability Council which reviews progress with the Executive Council twice yearly.

Acute physical

Relevant, always included

Our Business Continuity Management process implements the company’s commitment to ensuring its resilience through enterprise business continuity planning. The business continuity program has five components of preparedness: Business, Emergency, Information Technology, Human Resources and Supply Chain. All five components work together to help Boeing plan for, manage, and recover from emergencies, disasters and disruptive events. A centralized team of subject matter experts work in partnership with business unit and functional program leaders to reduce the risks to critical operations, and incidents with the potential to impact business continuity are structured on a 24/7/365 basis through our Global Security Operations Center (GSOC). Business Continuity is part of the corporate Enterprise Risk Management (ERM) operational risk framework. These activities are performed in close coordination with Boeing Capital Corporation’s Risk Management organization, which works to help and protect Boeing’s assets and portfolio. As part of Boeing’s ERM processes, we assess climate change related risks and opportunities at both the company level and the asset level to determine potential impacts to the business and subsequently incorporate any potential financial impacts into our standard business planning, and opportunity and risk management processes. These processes are the same at both the company and asset levels. While opportunity and risk management is part of standard business operations throughout programs and sites from a daily management perspective, there are also annual Board reviews of top-level, strategic, operational and compliance risks. Both the Audit Committee and full Board regularly address and review all key risks of the business, and climate change related and other environmental risks are among the topics explicitly covered. In addition, environmental and climate change related risks identified through these processes are shared with the Global Sustainability Council which reviews progress with the Executive Council twice yearly.

Chronic physical

Relevant, always included

Gradual, long-term (chronic) changes in climate are also considered. As an example, we considered the effects of water availability in our qualitative climate scenario analysis, with potential impacts on direct operational impacts or indirect impacts from infrastructure. Water is a key raw material and potential price volatility could affect other raw materials such as electricity. Government actions to limit greenhouse gas emissions could increase cost to our operations in those states. However, Boeing is acting at its operating sites across the United States to reduce energy consumption and increase our use of renewable energy to mitigate these risks. Boeing supports the goals of the Paris Climate Agreement. The U.S. re-commitment is important for addressing this global challenge. Of equal importance is the context of using multi-lateral forums to address climate change, is the International Civil Aviation Organization (ICAO) and its aircraft CO2 emissions standard, which was adopted in 2010. There are currently aircraft fuel standards in effect outside of the United States. These standards are consistent with the ICAO standards that have been adopted in the United States, and we look forward to working with the U.S. government to ensure Boeing aircraft are certified under this standard. In addition, various national governments and ICAO proceedings indicate that there is potential for additional aircraft emissions restrictions (e.g., for CO2, non-volatile particulate matter, nitrogen oxides, etc.). As part of Boeing’s ERM processes, we assess climate change related risks and opportunities at both the company level and the asset level to determine potential impacts to the business and subsequently incorporate any potential financial impacts into our standard business planning, and opportunity and risk management processes. These processes are the same at both the company and asset levels. While opportunity and risk management is part of standard business operations throughout programs and sites from a daily management perspective, there are also annual Board reviews of top-level, strategic, operational and compliance risks. Both the Audit Committee and full Board regularly address and review all key risks of the business, and climate change related and other environmental risks are among the topics explicitly covered. In addition, environmental and climate change related risks identified through these processes are shared with the Global Sustainability Council which reviews progress with the Executive Council twice yearly.

<Not Applicable>

**Explanation of financial impact figure**

**Cost of response to risk**

**Description of response and explanation of cost calculation**
There are currently aircraft fuel efficiency standards in effect outside of the United States. These standards are also being adopted in the United States which could preclude deliveries after 2027 of certain older aircraft models that may not meet the standards, unless they are upgraded or exemptions are granted. The magnitude of risk could be high, if not mitigated. We have selected “unknown” as the likelihood because we cannot quantify the expected impacts of our potential mitigation strategies, with respect to these older aircraft models not currently able to meet the requirements of the pending regulations. Our strategy to decarbonize aerospace—to reduce emissions—focuses on four key areas: fleet renewal, network operational efficiency, renewable energy transition and advanced technology. Safe, sustainable aerospace requires different certified solutions tailored to the needs, capabilities and constraints of different regions and markets. We have made solid progress in areas where we see the biggest potential: New commercial airplanes provide significant efficiency gains, with each generation reducing fuel use and emissions. Boeing has invested more than $60 billion over the last 10 years in key strategic areas to improve fuel efficiency and reduce emissions, including innovative technologies such as carbon composite materials, advanced high-bypass ratio engine designs, and other aerodynamic improvements. Decarbonizing aerospace will take more than a single company’s investment. Airlines have invested more than $1 trillion to purchase these new airplanes, in many cases to replace older, less-efficient models. Many airlines have accelerated retiring older airplanes during the pandemic, and we expect this trend will continue. Boeing committed that its commercial airplanes will be capable of flying on 100% sustainable aviation fuels, or SAF, by 2030. We also support the commercial aviation sector’s ambition to achieve net-zero carbon emissions for global civil aviation operations by 2050. We are partnering across the industry to collectively deliver on our ambition on climate action, enabling a more sustainable future. SAF is in regular (though limited) use today, and expanding its use offers the most immediate and largest potential to reduce carbon emissions over the next 20-30 years across all aviation segments. We are also focused on and investing in alternative energy solutions.

Explanation of financial impact figure
Cost of response to risk
Description of response and explanation of cost calculation
There are currently pending company or facility GHG emissions regulations, for which the magnitude of risk could be medium, if not mitigated. We have selected “likely” because of the number of initiatives among regulatory agencies, including carbon pricing mechanisms; the variety and range of different emerging schemes means that we cannot fully quantify the expected impacts of potential mitigation strategies, but economic analyses associated with proposed regulations provide notional estimations. Boeing strives to reduce operational GHG emissions, both during times of growth and during times of challenge. Boeing achieved net-zero carbon emissions at manufacturing and other facilities (Scopes 1 and 2, as reported to CDP) and in its business travel (Scope 3, Category 6) in 2021 by expanding conservation, energy efficiency projects, and renewable electricity use, while securing verified offsets for the remaining GHG emissions. Boeing intends to drive absolute GHG emissions reductions through renewable energy, continued efficiency improvements, implementation of additional conservation best practices, and sustainable design standards that can influence future planning and infrastructure. Our 2030 goals include the reduction of operational GHG emissions by 55% and the continuation of net-zero emissions for operations. Additionally, we have set a goal to achieve 100% renewable electricity by 2030 in our operations through a variety of verifiable mechanisms, including direct sourcing. Our strategy for Scope 1 and 2 emissions aligns to a 1.5°C global warming potential scenario, in support of the global climate goals including the United Nations Sustainable Development Goal 13 (Climate Action).

Explanation of financial impact figure

Cost of response to risk

Description of response and explanation of cost calculation

Extreme weather events have affected Boeing and our value chain, and we have therefore selected “very likely” as the likelihood. Based on experience with such events, the magnitude of risk could be medium-low, if not mitigated by Boeing risk management and insurance. Climate change is among the topics included in our enterprise risk management. Climate risks and opportunities inform our business strategy, investments and operational decision-making as evidenced by our ambitions and actions in our products and operations. Boeing performs ongoing analysis to monitor the risk and impacts from increased frequency of extreme weather events in our operations and takes mitigation actions accordingly to limit the financial impact of disruptions. For some hurricanes proximate to our operations, the company has been affected primarily by suspension of operations and preparation for the arrival of the storm (e.g., repositioning aircraft). Potential losses from extreme weather events are mitigated because Boeing has focused on climate resiliency in terms of our physical infrastructure (building design and construction, etc.) and because of our rigorous and detailed emergency response planning. Boeing’s Business Continuity Council provides oversight of acute physical risks to Boeing operations such as hurricanes. Specific aspects include Incident Management and Emergency Preparedness, which ensure extensive cross-functional collaboration before, during, and after an event to minimize the impact of acute physical risks on our operations. The Boeing Security and Fire Protection Global Security Operations Center (GSOC) provides the following services: • Continuous visibility of Boeing’s strategic risk landscape • A common operating picture of Boeing’s global enterprise • Centralized emergency and non-emergency dispatch • Alarm monitoring • Facilitation of crisis management operations • Support of business partners • Strategic intelligence products • Strategic risk monitoring The GSOC uses a proprietary web-based system that integrates “real-time” risk and threat data from internal and external sources. The system displays the information in a geospatial format. The system helps create a common operating picture, including critical processes, critical suppliers, traveling employees, building status, assets, and other important information.

Primary potential financial impact

Increased revenues through access to new and emerging markets

Company-specific description

Demand for aviation products and services with increased efficiency and lower-carbon emissions will continue to rise. Boeing is focused on four key areas to decarbonize Aviation including Fleet Renewal, Operational Efficiency, Renewable Energy and Advanced Technology. Each new generation of commercial aircraft typically improves upon the prior generation of similar aircraft by 15 to 20 percent, and sometimes more. For example, the 737MAX generation of our aircraft has 20 percent less CO2 emissions per passenger kilometer than the 737NG generation of aircraft; and the 787 aircraft has 20 to 25 percent less CO2 emissions per passenger kilometer than the aircraft it replaces. In addition, each airplane improves upon reliability and maintenance requirements, enabling greater utilization and overall resource productivity. Today, Boeing provides fuel optimization solutions, including a suite of software applications, which reduce fuel consumption during all phases of flight, and works with governments and Air Navigation Service Providers to implement next generation Air Traffic Management solutions. Boeing is focused on developing safe and sustainable future commercial airplanes and is investing in research on the enabling technologies for those future airplanes, including the safe and responsible introduction of disruptive and alternative next-generation air vehicles for urban—and potentially regional—transportation demands. This research includes electric and hydrogen-fueled propulsion systems for future aircraft.

Explanation of financial impact figure
The impact has not been quantified financially. We are targeting an absolute reduction of 10 percent of energy used in our operations by 2025, when compared to the 2017 baseline. By 2030, we are targeting 100% renewable electricity across the enterprise, through a variety of mechanisms, including direct purchases, renewable energy certificates and virtual power purchase agreements.

Cost to realize opportunity

Strategy to realize opportunity and explanation of cost calculation
Boeing advances and sustains its Energy Management program by following the fundamentals outlined in the ENERGY STAR Guidelines for Energy Management. Boeing’s mid-term goals include reducing energy use by 10% and GHG emissions by 25% by 2025, from a 2017 baseline. We are targeting a 55% reduction of GHG emissions by 2030. Actions and projects to support these and future goals demonstrate the strategic impact of this and other climate opportunities. We have provided information about our activities and program management to US EPA as part of the ENERGY STAR Partner of the Year program. The 2022 ENERGY STAR award is based on Boeing’s energy conservation efforts during 2021. These efforts include: • Achieving net-zero carbon emissions within its manufacturing and other facilities again in 2021 by expanding conservation and renewable energy use while securing responsible offsets for the remaining GHG emissions. • Leading action through employee events and communications such as the annual Battle of the Buildings (BoB) competition. In 2021, the BoB competition reached 168 sites across 39 countries and resulted in more than 72,000 actions being taken to improve the environment. • Investing $8.5 million in a new fund appropriated for capital conservation projects. • Setting goals to use 100% renewable electricity (direct or indirect purchases) by 2030 and reduce energy consumption by 10% by 2025 from a 2017 baseline. • Implementing conservation best practices that concentrate on employee behaviors and simplicity that continue to be reinforced today. Research done in cooperation with Duke University validates Boeing’s emphasis on Lean Energy Assessments, employee behaviors, and accountability.

Potential financial impact figure – minimum (currency)
<Not Applicable>

Potential financial impact figure – maximum (currency)
<Not Applicable>

Explanation of financial impact figure
The impact has not been quantified financially. Cost avoidance can be achieved as forward, long-term rates for renewable energy are competitive with traditional forms of energy.

Cost to realize opportunity
Strategy to realize opportunity and explanation of cost calculation
Boeing has set several targets for GHG emissions and for energy use: • A 25% reduction in GHG emissions associated with natural gas and electricity at core metric sites by 2025, from 2017 • A 10% energy use reduction at core metric sites by 2025, from 2017 • A 2030 goal of net zero emissions for Scopes 1 and 2 for all manufacturing and other facilities (achieved as of 2020) • A 55% Scope 1 and 2 GHG emissions reduction by 2030, from 2017, across the enterprise • 100% renewable electricity across the enterprise, through a variety of mechanisms, including direct purchases, renewable energy certificates and virtual power purchase agreements, by 2030 Boeing continues to invest in renewable energy and increased use of renewable energy may reduce potential regulatory burdens, including under carbon pricing scenarios. The company has targets to increase renewable energy use. Boeing recognizes the opportunity to improve energy performance through strategic investments and deployment of robust energy reduction best practices. Boeing used US EPA tools to develop and implement a new utility budgeting process, which facilitated the development of a data-driven utility budget. Forward-looking energy rates can now be incorporated into budgeting projections. The improved projections allow for an increase in strategic renewable energy procurement.

Comment
Because of continued participation in the EPA Green Power Program, Boeing achieved a ranking of #26 on the 2022 EPA Green Power Partnership list of Fortune 500 companies and a ranking of #45 overall; recognizing Boeing as the top in aerospace manufacturing. This achievement is because of company commitments to increase use of onsite and offsite renewable energy. Boeing continues to work towards achieving its 2030 goal of being powered by 100% renewable electricity (through multiple mechanisms), as seen in its recent partnership with the local utility to provide 25% of Boeing Mesa’s electricity from a new solar facility, supplementing existing renewable electricity agreements across numerous sites. Boeing is a recognized leader in the use of renewable energy and energy efficiency, and has reduced energy use in its manufacturing operations by more than 37% since 2007.

C3. Business Strategy

C3.1
(C3.1) Does your organization’s strategy include a transition plan that aligns with a 1.5°C world?

<td>Customized publicly available transition scenario</td>
<td>Company-wide</td>
<td>1.5°C</td>
<td>Transition risks and opportunities were assessed using a scenario based on the key (Paris Agreement) commitment of &gt;190 countries to limit global warming to well below 2°C above pre-industrial levels. The scenario assumes proactive and sustained action to reduce carbon emissions over the next 30 years to build a low carbon economy. The aviation sector’s 2050 goal of net zero is in line with the Paris Agreement. Sources that inform assumptions include projections used in Shared Socio-Economic Pathways (SSP), the IEA (Sustainable Development &amp; NZE2050), IPCC (RCP1.9 &amp; 2.6) and NSFS Orderly Scenario. Assumptions included environmental, social, political, economic, and technological elements. The project qualitatively assessed consequence of transition risks but not likelihood, which is ultimately mitigated by Boeing’s business strategy. The assessment included 13 risks and four opportunities. Boeing is currently evaluating the results and next steps.</td>
</tr>
</tbody>
</table>

| Physical climate scenarios | RCP 4.5 | Other, please specify (Diverse set of 50 sites globally to represent Boeing company-wide, customer locations, supplier sites, and transportation infrastructure.) | Physical risks were assessed using IPCC RCP 4.5 for 2030- and 2050-time horizons. The high-level physical risk analysis covers a subset of Boeing’s global portfolio of owned and third-party assets (e.g., belonging to key customers and suppliers) and some key infrastructure. The assessment included nine different vulnerability indicators (e.g., physical access to sites, water supply) for seven types of activities (e.g., fabrication, data processing) across the assessed assets. Physical risks included numerous potential effects of temperature, water, humidity, wind, flooding, and extreme weather events. The project qualitatively assessed consequence of physical risks but not likelihood, which is ultimately mitigated by Boeing’s business continuity plans. Boeing is currently evaluating the results and next steps. |

| Physical climate scenarios | RCP 8.5 | Other, please specify (Diverse set of 50 sites globally to represent Boeing company-wide, customer locations, supplier sites, and transportation infrastructure.) | Physical risks were assessed using IPCC RCP 8.5 for 2030- and 2050-time horizons. RCP 8.5 generally introduces the stronger risks and thus the upper boundary for the assessment (as compared to 4.5). The high-level physical risk analysis covers a subset of Boeing’s global portfolio of owned and third-party assets (e.g., belonging to key customers and suppliers) and some key infrastructure. The assessment included nine different vulnerability indicators (e.g., physical access to sites, water supply) for seven types of activities (e.g., fabrication, data processing) across the assessed assets. Physical risks included numerous potential effects of temperature, water, humidity, wind, flooding, and extreme weather events. The project qualitatively assessed consequence of physical risks but not likelihood, which is ultimately mitigated by Boeing’s business continuity plans. Boeing is currently evaluating the results and next steps. |

**C3.2b**

(C3.2b) Provide details of your organization’s use of climate-related scenario analysis.
(C3.2b) Provide details of the focal questions your organization seeks to address by using climate-related scenario analysis, and summarize the results with respect to these questions.

Row 1

Focal questions

Results of the climate-related scenario analysis with respect to the focal questions

The work led us to focus on the above-referenced transition risk scenario (see C3.2a), for 2030 and 2050. Higher transition risks are associated with aggressive global mitigation actions to reduce emissions and no significant changes to current physical risks. On the other hand, with a global failure to transition to a low-carbon economy, pathways are likely to lead to a potentially significant increase in physical risks and adaptation risk. For these risks, as noted in C3.2a, the work led us to select RCP4.5 and RCP8.5 for the present day, 2030, and 2050. The climate scenario analysis included 50 crucial sites across nine countries, comprising Boeing operations, suppliers, customers, and infrastructure. For the physical assessment, the locations were further divided into activity types, recognizing, for example, that airfield activity could be differently affected by a wind storm than part storage at the same site. Nine different vulnerability indicators were used to assess potential risks to people, facilities, and operations. Six broad categories of physical hazards were subdivided into 43 specific potential hazard conditions. This physical risk assessment created an understanding of the site-level risk and hazard data specific to each activity type. Consultants prepared a heatmap to indicate which sites and activities are most likely to be affected by the included risks, and how those effects change over time, if Boeing’s mitigation efforts did not address them. This science-based, qualitative comparison is a first step in a tiered risk management approach to identify risks relative to all assets and activities across the portfolio. In addition to the ports and railways that were included in the infrastructure analysis, we also considered the effects of climate change on the operation of aircraft broadly. For the transition risk assessment, we considered policy and legal matters, market considerations, reputational factors, and technology topics.

(C3.4) Describe where and how climate-related risks and opportunities have influenced your financial planning.

<table>
<thead>
<tr>
<th>Financial planning elements that have been influenced</th>
<th>Description of influence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Revenues</td>
<td>The development and expansion of low emission goods and services represents an opportunity for increased revenues through access to new and emerging markets. We believe the next generation of aircraft will incorporate the latest airframe, propulsion and systems technology, as well as additional power and energy solutions for some different market segments and aircraft sizes. Boeing has been partnering across the industry on concepts for advanced aircraft that can meet specific energy efficiency, environmental and operational goals in 2030 and beyond. For example, our Transonic Truss-Braced Wing (TTBW) concept, provides a 3% improvement in fuel burn when compared to a cantilevered wing of the same technology level. Other projects are aimed at electric propulsion maturation of various types. Our work in electric aviation and power systems is advancing in our joint venture Wisk, which is working to develop, test and certify battery-electric vehicles and their safe, autonomous deployment in the airspace. For example, Cora, a two passenger eVTOL air taxi that we’re developing with Wisk has flown more than 1,500 successful test flights since 2017. Boeing has researched hydrogen, green hydrogen and fuel cell applications for over 15 years, including five demonstration projects and significant space-based experiences. The insights gained through our flight demonstration programs with hydrogen fuel cells and combustion engines are informing future studies on scaled systems, configurations and infrastructure. To accelerate innovation, we also use our ecoDemonstrator flying test bed program to take promising technologies out of the lab and test them in the air. The ecoDemonstrator has tested over 170 projects on seven airplanes to date, including the advanced technology winglets that save fuel, a laser system that can detect clear air turbulence and landing gear that lessens noise. Use of more efficient production and distribution processes represents an opportunity to reduce indirect (operating) costs. We know sustainable aerospace starts inside our four walls. We are focused on continual improvements in pursuit of the sustainable product life cycle. We have continued to invest in conservation best practices, including efforts to replicate best practices in the aviation industry, beyond our own operations. We have dedicated staff focused on capitalizing on employee engagement and on implementing new ideas and events to drive positive behavioral change every day.</td>

Please explain target coverage and identify any exclusions
The 25 percent GHG target as compared to 2017 baseline target is set based on the emissions from Natural Gas and Electricity usage from Core Metric Sites, which represent roughly 70 percent of Boeing's global Scope 1 and 2 GHG emissions inventory. This target was developed using SBTi Sector-based approach.

Plan for achieving target, and progress made to the end of the reporting year
- Increase usage of renewably-sourced electricity and Renewable Energy Credits.
- Increase usage of Sustainable Aviation Fuel.
- Start phasing out of gasoline/diesel powered vehicles.
- Electricity and Natural Gas conservation projects implemented at manufacturing sites. For 2021: Greenhouse gas emissions were 10% under plan primarily due to reduced production activities and procurement of renewables.

C4.3c
(C4.3c) What methods do you use to drive investment in emissions reduction activities?

<table>
<thead>
<tr>
<th>Method</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Other (Conservation Projects)</td>
<td>Conservation projects are being tracked and there is a planning process in place for sites to evaluate potential projects and the timing of investment in conservation projects. This includes engineering studies to evaluate energy efficiency capital projects that could be implemented in the future. We have achieved additional energy benefits, although not specifically quantified, through sustaining maintenance activities and new construction or major building refurbishment projects.</td>
</tr>
<tr>
<td>Dedicated budget for low-carbon product R&amp;D</td>
<td>Fuel efficiency and CO2 emissions reduction, the driving technology force in our industry. For this reason, a substantial portion of our research and product development budget for commercial airplanes is directed towards lower-carbon emitting products. New commercial airplanes provide significant efficiency gains, with each generation reducing fuel use and emissions. Boeing has invested more than $60 billion over the last 10 years in key strategic areas. To accelerate innovation, we also use our ecoDemonstrator flying test bed program to take-advancing technologies out of the lab and test them in the air and on the ground. The ecoDemonstrator has tested over 170 projects to date, including the advanced technology winglets that save fuel, a laser system that can detect clear air turbulence and landing gear that lessens noise. The Boeing ecoDemonstrator program takes promising technologies out of the lab and tests them to make flying safer and more sustainable. The ecoDemonstrator program has evaluated technologies using a 737 (2012), 787 Dreamliner (2014-), 757 (2015), an Embraer E170 regional jet (2016, and the first such collaboration between two airplane manufacturers), a 777 Freighter (2018), a 777-200 (2019), and a 787-10 Dreamliner (2020). About one-third of the technologies tested on these flight test programs have transitioned to either production programs or in-service solutions for customers. For example, natural laminar flow winglets that improved fuel efficiency during testing in 2012 with the 737 are now standard equipment on the 737MAX. The 2018 777 ecoDemonstrator platform tested technology allowing it to fly on sustainable aviation fuel throughout the entirety of the flight test program, which helped lead to the first-ever commercial flights on 100% sustainable aviation fuel. The 2021 ecoDemonstrator program flight tested about 20 technologies on a new Alaska Airlines 737-9 MAX airplane. Boeing and Alaska worked with the National Oceanic and Atmospheric Administration to expand its measurements of greenhouse gas emissions, which will help improve climate modeling and long-term forecasting. The team also evaluated an engine nacelle designed to reduce noise and assessed cabin sidewalls made from recycled material, among other projects. Boeing and Alaska Airlines worked with 9 other partners to test new technologies.</td>
</tr>
<tr>
<td>Dedicated budget for other emissions reduction activities</td>
<td>Boeing is committed to environmental protection and stewardship at all levels — conducting its operations in compliance with applicable environmental laws, regulations, and internal policies and procedures. In 2021, Boeing funding helped support 482 environmental programs in countries across the globe. Along with Boeing nonprofit environmental partners and other stakeholders, the company is working together on activities that promote environmental protection and stewardship toward the goals of improving the quality and sustainability of our global water supply, preserving and restoring ecosystems and protect wildlife. Boeing corporate charitable investments are amplified by employee giving. In 2021, Boeing employees donated more than $36 million, which includes the Boeing company match, and contributed 290,000 volunteer hours to charitable causes — bringing total employee giving to more than $350 million over the last 10 years. As part of our commitment to sustainability — with a focus on environmental stewardship and biodiversity — Boeing donated $1 million to the National Wildlife Federation in February 2022 for the Wallis Annenberg Wildlife Crossing in Los Angeles. The crossing, with ceremonial groundbreaking in April 2022, will span 10 lanes of U.S. Highway 101 to reconnect an integral wildlife zone near Boeing’s Santa Susana Field Laboratory. The wildlife crossing will be critical in the effort to save the threatened local mountain lion population from extinction. Boeing has a history of partnerships with the National Wildlife Federation, including donations for the wildlife crossing campaign, a long-term mountain lion study in the Santa Monica Mountains and educational outreach.</td>
</tr>
<tr>
<td>Employee engagement</td>
<td>Active engagement of employees is a critical component of improving the environmental performance of Boeing operations; doing this well requires unique approaches at different sites and with different groups of employees. Boeing’s employee engagement program focuses on identifying and removing barriers that prevent employees from adopting sustainable behaviors. This is done through deploying employee-based social marketing techniques and by providing tools to help employees save energy and water and reduce waste. Resources are centrally available and include a website; social networking site; conservation and behavior change communities of practice; playbooks for best practices; gamification; hands-on learning kits; communications; environment tips and training. One of the highlights of this program is Boeing’s annual Battle of the Buildings Competition (BoB), which is the key recognition of Earth Day at Boeing Operations. Through BoB, Boeing leverages the gamification of conservation to engage employees to change behaviors and reduce energy use and greenhouse gas emissions — whether they’re working at a Boeing site or at home.</td>
</tr>
<tr>
<td>Internal incentives/recognition programs</td>
<td>Boeing sponsors an annual internal Environmental Leadership Awards program to recognize and encourage replication of environmental and conservation best practices worldwide across the company. The award also recognizes innovative ideas and proactive efforts to implement measures to benefit the environment.</td>
</tr>
<tr>
<td>Lower return on investment (ROI) specification</td>
<td>In 2019, Boeing also joined the Renewable Energy Buyer’s Alliance and entered into contracts to expand our use of 100% renewable electricity. In 2021, Boeing procured enough renewable electricity to account for the electricity used in our factories in Renton, Washington and Charleston, South Carolina; most sites in Illinois, Indiana, Ohio, Pennsylvania, Texas, and the UK; and a large data center in Arizona.</td>
</tr>
<tr>
<td>Other (ENERGY STAR)</td>
<td>Boeing has been an EPA Energy Star Partner of the Year every year since 2010, receiving a Sustained Excellence Award for maintaining its energy management program (<a href="https://www.energystar.gov/aboutcontent/boeing_company_1">https://www.energystar.gov/aboutcontent/boeing_company_1</a>).</td>
</tr>
<tr>
<td>Compliance with regulatory requirements/standards</td>
<td>Through collaboration with global stakeholders over several years, Boeing supported development and adoption of two complementary global carbon emission–reduction measures agreed to in 2016 by ICAO: a fuel efficiency standard for newly manufactured airplanes and a market-based carbon-offset program known as CORSIA. New commercial aircraft will be required to meet ICAO’s fuel efficiency standards as they are implemented by member nations over the next several years. And airlines flying between participating nations will begin adopting a market-based carbon-offset program. CORSIA. Over 100 states now participate in CORSIA, covering approximately 80 percent of the estimated growth in emissions from international aviation after 2020. Offset credits purchased through the program, which will be assessed to ensure they meet stringent environmental integrity criteria, will finance projects to reduce CO2 emissions, many in developing countries. In 2020, we advocated for US adoption of the ICAO standards. Boeing also voluntarily participated in the US Federal Aviation Administration’s (FAA) initial CORSIA data request in 2021.</td>
</tr>
<tr>
<td>Other (Sustainable Aviation Fuel Activities)</td>
<td>Boeing continues to be a leader in the aviation industry for developing and commercializing sustainable aviation fuels (SAF). Sustainable aviation fuels represent commercial aviation’s greatest opportunity to reduce CO2 emissions, meet the aerospace industry’s environmental goals, and support long-term sustainable growth. Substantial progress has been made on dozens of collaborative projects around the world with near- and long-term potential to deliver sustainable aviation fuel to airline customers. In January 2021, Boeing established a goal that current and future commercial aircraft will be 100% SAF capable by 2030. The company also plans to work with regulatory authorities and across the industry to raise the current 50% blending limit for expanded use of SAF. Boeing’s 2018 ecoDemonstrator 777 Freighter made history as the world’s first commercial aircraft to fly on 100% sustainable fuel. The 2021 ecoDemonstrator program included test flights on 50% SAF, currently the maximum sustainable fuel blend permitted for commercial aviation.</td>
</tr>
</tbody>
</table>

(C4.5) Do you classify any of your existing goods and/or services as low-carbon products?

Yes
(C4.5a) Provide details of your products and/or services that you classify as low-carbon products.

Level of aggregation
Group of products or services

Taxonomy used to classify product(s) or service(s) as low-carbon
Other, please specify (Standard airplane performance analysis tools)

Type of product(s) or service(s)

| Aviation | Other, please specify (Commercial Aircraft, new lower-carbon versions) |

Description of product(s) or service(s)
737MAX, 787, and 777X families of airplane products. 737MAX and 787 are currently in-production and available for order and delivery to replace the prior generation of similar airplanes. 777X is currently in development and available for order to replace the prior generations of 777, 747, A340, and A380 airplanes to reduce CO2 emissions in support of commercial aviation goal of net zero emissions by 2050. Each new generation of aircraft typically improves upon the prior generation of similar aircraft by 15 to 20 percent, and sometimes more. For example, the 737MAX generation of our aircraft has 20 percent less CO2 emissions per passenger kilometre than the 737NG generation of aircraft, and the 787 aircraft has 20 to 25 percent less CO2 emissions per passenger kilometre than the aircraft it replaces. Per ASTM standards, all commercial turbojet airplanes are certified to fly revenue passengers with a blend of up to 50% sustainable aviation fuels derived from biomass and other sustainable sources. Boeing Commercial Airplanes 2021 revenues ($19.5B) are listed in our AR Form 10-K.

Have you estimated the avoided emissions of this low-carbon product(s) or service(s)
No

C5. Emissions methodology

C5.1

(C5.1) Is this your first year of reporting emissions data to CDP?
No

C5.1a

(C5.1a) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?
Row 1

Has there been a structural change?
No

Name of organization(s) acquired, divested from, or merged with
<Not Applicable>

Details of structural change(s), including completion dates
<Not Applicable>

C5.1b
(C5.1b) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?

<table>
<thead>
<tr>
<th>Change(s) in methodology, boundary, and/or reporting year definition?</th>
<th>Details of methodology, boundary, and/or reporting year definition change(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes, a change in methodology</td>
<td>CHANGE IN METHODOLOGY: Changes in emission factors used (Impact: Scope 1 and Scope 2). Examples: - Supplier-specific emission factors were released for 2017-2021 by electricity suppliers for some core Boeing manufacturing sites. (Scope 2 Market-based) - Updated eGRID emission factor revision applied to reporting years. Reason being, eGRID often releases their emission factors after CDP report is submitted. Additionally, eGRID had an out of sync eGRID emission factor release in 2019. (Scope 2 Location-based and Market-based) - Updated emission factor for Sustainable Aviation Fuel usage to align with ICAO publication per SBTi guidance, “Science Based Target Sector for the Aviation Industry” August 2021 Version 1.0. (Minor impact, Scope 1)</td>
</tr>
<tr>
<td>Yes, a change in boundary</td>
<td>CHANGE IN BOUNDARY: Expanded reporting. (Impact: Scope 3, Category 11) - Use of Sold Products emissions are based on estimated lifetime emissions of Boeing Commercial Airplanes and Boeing Defense, Space &amp; Security products. Previously reported emissions from Boeing Commercial Airplanes only.</td>
</tr>
<tr>
<td>No, but we have discovered significant errors in our previous response(s)</td>
<td>SIGNIFICANT ERRORS IN OUR PREVIOUS RESPONSE(S): Unit Conversion (Impact: Scope 3, Category 11) - Use of Sold Products emissions for Boeing Commercial Airplanes reported previously had a conversion error in its supporting calculations. Error was discovered, corrected, and recalculated. Use of Sold Products emissions for Boeing Commercial Airplanes were verified to the level of Limited Assurance via third party.</td>
</tr>
</tbody>
</table>

(C5.1c) Have your organization’s base year emissions been recalculated as result of the changes or errors reported in C5.1a and C5.1b?

<table>
<thead>
<tr>
<th>Base year recalculation</th>
<th>Base year emissions recalculation policy, including significance threshold</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>We adhere to ISO14064 for our GHG inventory and reporting methodology. Any change to our emissions reporting greater than 5% results in a recalculation.</td>
</tr>
</tbody>
</table>

C6.4

(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1 and Scope 2 emissions that are within your selected reporting boundary which are not included in your disclosure?
No

C6.5

(C6.5) Account for your organization's gross global Scope 3 emissions, disclosing and explaining any exclusions.
Purchased goods and services

Evaluation status
Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
More than 12,000 suppliers, ranging from small- to large-size companies, work every day to help Boeing account for 3 million-plus parts on an airplane. Today, Boeing is more focused than ever on not only increasing collaboration and engagement with its suppliers, but also promoting robust environmental practices by our suppliers. Boeing is collaborating with other International Aerospace Environmental Group (IAEG) member companies in an effort to establish a common accounting methodology for the Purchased Goods and Services category for aerospace manufacturers. Applying the published IAEG guidance, Boeing estimated this category using the average spend-based estimating approach and determined this category is not relevant. Based on this criteria, GHG emissions associated with upstream leased assets is not relevant in comparison to Category 11 emissions (emissions for use of sold products).

Capital goods

Evaluation status
Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
In 2021, we occupied approximately 84 million square feet of floor space for manufacturing, warehousing, engineering, administration and other productive uses, of which approximately 93 percent was located in the United States. Of that total, we owned approximately 78 million square feet of property in the US. Boeing is collaborating with other International Aerospace Environmental Group (IAEG) member companies in an effort to establish a common accounting methodology for the Capital Goods category for aerospace manufacturers. Applying the published IAEG guidance, Boeing estimated this category using the average spend-based estimating approach and determined this category is not relevant. (Square footages based on those included within our Operational Control, and thereby our Organizational Boundary.)

Fuel-and-energy-related activities (not included in Scope 1 or 2)

Evaluation status
Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
Category is not relevant based on relevance assessment conducted by International Aerospace Environmental Group (IAEG). This assessment is based on the criteria defined in The GHG Protocol Corporate Value Chain Accounting and Reporting Standard, which includes size, influence, risk and stakeholders. Each Scope 3 category is scored numerically against each criterion to determine the relevancy of each Scope 3 category to the aerospace industry. Recognizing the diversity in aerospace products, IAEG Work Group 3 conducted the assessment at a sub-industry level. The aerospace sub-industries included in this assessment are final assembly, electrical components, software, engines, structural components, and interiors. Based on this criteria, GHG emissions associated with fuel and energy-related activities is not relevant.

Upstream transportation and distribution

Evaluation status
Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
More than 12,000 suppliers, ranging from small- to large-size companies, work every day to help Boeing account for 3 million-plus parts on an airplane. We have suppliers in every state in the U.S. and 48 countries. The complexity in our supply chain brings challenges to account for GHG emissions in this category. Applying the published IAEG guidance, Boeing estimated this category and determined that it is not relevant.
Waste generated in operations

Evaluation status
Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
Category is not relevant based on relevance assessment conducted by International Aerospace Environmental Group (IAEG). This assessment is based on the criteria defined in The GHG Protocol Corporate Value Chain Accounting and Reporting Standard, which includes size, influence, risk and stakeholders. Each Scope 3 category is scored numerically against each criterion to determine the relevancy of each Scope 3 category to the aerospace industry. Recognizing the diversity in aerospace products, IAEG Work Group 3 conducted the assessment at a sub-industry level. The aerospace sub-industries included in this assessment are final assembly, electrical components, software, engines, structural components, and interiors. Based on this criteria, GHG emissions associated with upstream leased assets is not relevant.

Business travel

Evaluation status
Not relevant, calculated

Emissions in reporting year (metric tons CO2e)
52000

Emissions calculation methodology
Fuel-based method
Distance-based method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
100

Please explain
GHG emissions come from our employees' air travel and rental cars during business travel. Although after applying the published IAEG guidance, Boeing estimated this category and determined that it is not relevant, we have chosen to tabulate and include this value because Boeing currently offsets employee business travel (notably, this is beyond our stated goal of net zero Scope 1 and 2 GHG emissions. Methodologies for Scope 3 business travel were provided by WRI Mobile Combustion Calculation Tool Ver. 2.5. Purchased air travel emissions are based on the Distance Travelled Approach and do not include subsidiary holdings that are not fully integrated. Rental car emissions are calculated based on fuel usage estimation. Our calculations include the following assumptions: • All fuels are burned and other direct GHG are emitted in year purchased. • Scope 3 rental car emissions based on miles travelled and average fuel economy predicted for each car class as provided by rental car companies. Numbers are rounded to thousands.

Employee commuting

Evaluation status
Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
Boeing employs approximately 142,000 people worldwide, and this creates challenges for calculating GHG emissions in this category. Applying the published IAEG guidance, Boeing estimated this category and determined that it is not relevant.

Upstream leased assets

Evaluation status
Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
Category is not relevant based on relevance assessment conducted by International Aerospace Environmental Group (IAEG). This assessment is based on the criteria defined in The GHG Protocol Corporate Value Chain Accounting and Reporting Standard, which includes size, influence, risk and stakeholders. Each Scope 3 category is scored numerically against each criterion to determine the relevancy of each Scope 3 category to the aerospace industry. Recognizing the diversity in aerospace products, IAEG Work Group 3 conducted the assessment at a sub-industry level. The aerospace sub-industries included in this assessment are final assembly, electrical components, software, engines, structural components, and interiors. Based on this criteria GHG emissions associated with upstream leased assets is not relevant.
Downstream transportation and distribution

Evaluation status
Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
Because most of our customers take delivery of our aircraft products at our facilities or our delivery centers, emissions from this category are de minimis and not relevant.

Processing of sold products

Evaluation status
Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
Category is not relevant based on relevance assessment conducted by International Aerospace Environmental Group (IAEG). This assessment is based on the criteria defined in The GHG Protocol Corporate Value Chain Accounting and Reporting Standard, which includes size, influence, risk and stakeholders. Each Scope 3 category is scored numerically against each criterion to determine the relevancy of each Scope 3 category to the aerospace industry. Recognizing the diversity in aerospace products, IAEG Work Group 3 conducted the assessment at a sub-industry level. The aerospace sub-industries included in this assessment are final assembly, electrical components, software, engines, structural components, and interiors. Based on this criteria, GHG emissions associated with downstream leased assets is not relevant.

Use of sold products

Evaluation status
Relevant, calculated

Emissions in reporting year (metric tons CO2e)
30000000

Emissions calculation methodology
Methodology for direct use phase emissions, please specify (methodology aligned with the Greenhouse Gas Protocol)
Methodology for indirect use phase emissions, please specify (methodology aligned with the Greenhouse Gas Protocol)
Other, please specify (Data necessary to calculate Scope 3 lifetime emissions data for sold products is not available from suppliers or airline customers. Estimation method includes company data and validated third-par emissions factors.)

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Please explain
Emission are estimated with methodology aligned with the Greenhouse Gas Protocol. Total CO2e output, based on CO2, CH4, and N2O over the estimated lifetime of our products including upstream fuel production is calculated based on the formula: (# of units produced in a year) x (emissions per year) x (average lifespan of the product) x (upstream fuel production factor). Assumptions include utilization and retirement age based on average of last 10 years of industry data, average retirement age of ~23 years across all commercial products. We also developed a methodology for calculating defense product emissions, based on service life and average fuel flow. Finally, we included upstream fuel production, which accounts for 13% of total emissions (whereas direct combustion is 87% of the total). Use of sold products emissions includes direct emissions from combustion of fuel (261,000,000 metric tons) and indirect emissions from production of fuel (39,000,000 metric tons). Numbers are rounded to nearest million metric tons.

End of life treatment of sold products

Evaluation status
Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
Category is not relevant based on relevance assessment conducted by International Aerospace Environmental Group (IAEG). This assessment is based on the criteria defined in The GHG Protocol Corporate Value Chain Accounting and Reporting Standard, which includes size, influence, risk and stakeholders. Each Scope 3 category is scored numerically against each criterion to determine the relevancy of each Scope 3 category to the aerospace industry. Recognizing the diversity in aerospace products, IAEG Work Group 3 conducted the assessment at a sub-industry level. The aerospace sub-industries included in this assessment are final assembly, electrical components, software, engines, structural components, and interiors. GHG emissions associated with dismantling and recycling sold products after end of service life is not relevant.

(C6.10) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

Intensity figure
0.00001699

Metric numerator (Gross global combined Scope 1 and 2 emissions, metric tons CO2e)
1058000

Metric denominator
unit total revenue

Metric denominator: Unit total
62286000000

Scope 2 figure used
Market-based

% change from previous year
8.5

Direction of change
Decreased

Reason for change
Numerator: Scope 1 + Scope 2 (Market) emissions were lower in 2021 as compared to 2020. This was largely due to increased usage of renewable energy. Since our baseline year of 2017, Boeing has increased our global renewable energy by 64%. Despite cold northwestern U.S. weather in December, energy continued to be under plan overall for the enterprise. Energy usage was down due to remote working conditions; reduced production activities; and conservation gains. Denominator: Boeing revenue was higher in 2021 than in 2020, per 2021 Annual Report. Revenues increased by $4,128M in 2021 compared with 2020 driven by higher revenues at BCA, BDS and BGS. BCA revenues increased by $3,331M primarily driven by higher 737 MAX deliveries due to recertification and return to service in most jurisdictions and the absence of $498M of 737 MAX customer considerations which reduced revenues in 2020, partially offset by lower 787 deliveries in 2021. BDS revenues increased by $283M primarily from higher revenue on the KC-46A Tanker program and lower charges in 2021. BGS revenues increased by $283M primarily from higher revenue on the KC-46A Tanker program and lower charges in 2021. BGS revenues increased by $785 million primarily due to higher commercial and government services volume. Revenues decreased by $18,401M in 2020 compared with 2019 primarily due to lower revenues in our commercial airplanes and commercial services businesses. Revenues for each of our segments have been adversely impacted by COVID-19. BCA revenues decreased by $16,093M due to lower deliveries driven by the impacts of the COVID-19 pandemic, 787 production issues and the 737 MAX grounding, offset by lower charges related to estimated potential concessions and other considerations to 737 MAX customers. BDS revenues increased by $162M primarily due to higher fighter aircraft and other volume, partially offset by the impact of higher unfavorable cumulative contract catch-up adjustments, largely due to KC-46A Tanker charges in 2020. BGS revenues decreased by $2,925M primarily due to lower commercial services revenue driven by the COVID-19 pandemic. The changes in Unallocated items, eliminations and other primarily reflect the timing of eliminations for intercompany aircraft deliveries, as well as reserves related to cost accounting litigation recorded in 2019. Revenues will continue to be significantly impacted until deliveries ramp up and the commercial airline industry recovers from the impacts of COVID-19.

(C7.1) Does your organization break down its Scope 1 emissions by greenhouse gas type?
Yes

(C7.1a) Does your organization break down its Scope 1 emissions by greenhouse gas type?
(C7.1a) Break down your total gross global Scope 1 emissions by greenhouse gas type and provide the source of each used greenhouse warming potential (GWP).

This accounting method includes the emissions from the following business divisions: Commercial Airplanes, and Defense, Space & Security.

### C-TO7.8
(C-T07.8) Provide primary intensity metrics that are appropriate to your indirect emissions in Scope 3 Category 11: Use of sold products from transport.

**Activity**
Aviation

**Emissions intensity figure**

**Metric numerator (Scope 3 emissions: use of sold products) in Metric tons CO2e**

**Metric denominator**
Lkm

**Metric denominator: Unit total**

**% change from previous year**

**Vehicle unit sales in reporting year**
324

**Vehicle lifetime in years**
22.5

**Annual distance in km or miles (unit specified by column 4)**

**Load factor**
The 2021 industry average passenger load factor is 68 percent worldwide

**Please explain the changes, and relevant standards/methodologies used**

Typical median in-service lifetime for commercial freighter aircraft is 25-30, whereas the lifetime for commercial passenger aircraft is 20-25 years. The mean of the 20 to 25-year range for commercial passenger aircraft is entered into the Vehicle Lifetime in Years field. In 2021 Boeing delivered totally 324 commercial aircraft, which includes 737, 747, 767, 777 and 787 aircraft models. Note that commercial aircraft ranges and performance vary widely across Boeing’s product offerings, which affects these averages. Only commercial aircraft sales are reported above. (Excludes 737-800’s delivered to P8 program.)

---

**C7.9**

(C7.9) How do your gross global emissions (Scope 1 and 2 combined) for the reporting year compare to those of the previous reporting year?

**Decreased**

**C7.9a**

(C7.9a) Identify the reasons for any change in your gross global emissions (Scope 1 and 2 combined), and for each of them specify how your emissions compare to the previous year.

<table>
<thead>

Please explain

A primary performance metric used in comparison of commercial aircraft is fuel consumption (which is proportional to CO2 emissions) per passenger kilometer. Each new generation of aircraft typically improves upon the prior generation of similar aircraft by 15 to 20 percent, and sometimes more. For example, the 737MAX generation of our aircraft has 20 percent less CO2 emissions per passenger kilometer than the 737NG generation of aircraft; and the 787 aircraft has 20 to 25 percent less CO2 emissions per passenger kilometer than the aircraft it replaces. For example, the 737MAX generation of our aircraft has 20 percent less CO2 emissions per passenger kilometer than the 737NG generation of aircraft; and the 787 aircraft has 20 to 25 percent less CO2 emissions per passenger kilometer than the aircraft it replaces. As aircraft are long-lived assets, with long product development cycles lasting several years, and long production lifetimes, they do not change materially on a year to year basis except when significant performance improvement packages are incorporated.

Direction of change

Decreased

Please explain

The 10 percent energy reduction as compared to 2017 baseline target is set based on the consumption of Natural Gas and Electricity usage from Core Metric Sites, which represent roughly 70 percent of Boeing's total energy consumption. Percent change listed is calculated comparing 2021 to baseline year (2017).

C-TO9.3/C-TS9.3
Provide tracking metrics for the implementation of low-carbon transport technology over the reporting year.

**Activity**
- Aviation

**Metric**
- Other, please specify (Aircraft compatible with sustainable aviation fuel)

**Technology**
- Other, please specify (Compatible with sustainable aviation fuel)

**Metric figure**
- Percentage of delivered aircraft which are compatible with sustainable aviation fuel

**Explanation**
All sustainable aviation fuels approved for use in aviation are drop-in replacement fuels. Fuel that meets the requirements described in D7566 are reclassified as ASTM D1655 Jet A/A1 fuel and there are no restrictions for use of the fuel and the same compliance and performance guarantee are met. Today, sustainable aviation fuels are mixed directly with conventional jet fuel up to a 50/50 blend — the maximum allowed under current fuel specifications. All current production and in-service Boeing commercial airplanes are compatible with sustainable aviation fuel produced under and meeting this ASTM specification.

**Activity**
- Aviation

**Metric**
- Production

**Technology**
- Other, please specify (Transition to latest generation aircraft)

**Metric figure**
- Metric figures are provided in the explanation field

**Explanation**
Each commercial airplane model that Boeing produces is the most efficient in its class and represents the best in class low-carbon transport technology. The data below indicates transition to next generation of aircraft technology: - 100 percent of all 737 airplanes delivered in 2021 (245 of 245); First deliveries of the latest generation 737MAX were in 2017, and the 737MAX is 20 percent more efficient than the 737NG. (Excludes 737-800’s delivered to P8 program) - 100 percent of all 787 airplanes delivered in 2021 (14 of 14); First delivery of 787 was in 2011, and the 787 is 20-25 percent more efficient than the airplanes they replace. - 0 percent of all 777 airplanes delivered in 2021 (0 of 24); 777X airplanes are currently in development; they will be the most fuel efficient airplanes in its class when the 777X enters service.

Does your organization invest in research and development (R&D) of low-carbon products or services related to your sector activities?

(C-CE9.6i/C-CG9.6i/C-CH9.6i/C-CN9.6i/C-CO9.6i/C-EU9.6i/C-MM9.6i/C-OG9.6i/C-RE9.6i/C-ST9.6i/C-TO9.6i/C-TS9.6i)

C-TO9.6a/C-TS9.6a

(C-TO9.6a/C-TS9.6a) Provide details of your organization’s investments in low-carbon R&D for transport-related activities over the last three years.

**Activity**
- Aviation

**Technology area**
- Other, please specify (All)

**Stage of development in the reporting year**
- Applied research and development

**Average % of total R&D investment over the last 3 years**
- 61-80%

**R&D investment figure in the reporting year (optional)**
- 1799000000

**Comment**
Boeing estimates that roughly 80 percent of its R&D dollars go toward efficiency improvement, which correlate directly to CO2 emission reduction. Research and development expense decreased by $227 million in 2021 compared with 2020 primarily due to lower BCA and enterprise investments in product development and lower spending on the 777X program. (Source: 2021 Boeing Annual Report)
C10. Verification

(C10.1) Indicate the verification/assurance status that applies to your reported emissions.

(C11.1d) What is your strategy for complying with the systems you are regulated by or anticipate being regulated by?

Boeing plans to reduce its GHG Emissions and continue to be fully compliant with all GHG Emissions related regulations. We are on track to be compliant with the EU ETS and UK ETS, effective 2022. In 2021, Boeing also voluntarily participated in the inaugural CORSIA data call by the US FAA. We have implemented internal processes for tracking and recording relevant data. For the Washington Climate Commitment Act (CCA), we are actively implementing internal controls to ensure integrity of reporting. We are on track to meet regulatory obligations when it takes effect in 2023.
### C11.2

(C11.2) Has your organization originated or purchased any project-based carbon credits within the reporting period?  
Yes

Rationale for the coverage of your engagement
Boeing joined the CDP Supply Chain program in 2022 to start engaging suppliers on climate action and emissions transparency. Selected suppliers represent ~85% of spend in Scope 3 categories 1 (Purchased Goods & Services), 2 (Capital Goods) and 4 (Upstream Transportation & Distribution) while also accounting for suppliers in procurement categories with comparatively higher emissions. While these Scope 3 categories are not relevant for Boeing’s broader climate action perspective (see section C6.5 for rationale), we are engaging suppliers as part of a comprehensive climate stewardship approach as discussed in the Operations section of Boeing’s 2022 ESG report (https://www.boeing.com/principles/sustainability/annual-report/index.page#operations). By building a transparent supply chain climate action foundation accounting for the predominance of our supplier spend, it will inform potential future supply chain climate actions. In addition, to the suppliers engaged via CDP’s Supply Chain program, we also engage suppliers to innovate in order to reduce the impact of their products, services, and operations on climate change. In many cases, suppliers are proactively taking action, and seeking opportunities to collaborate on climate stewardship.

Impact of engagement, including measures of success
Given Boeing started the CDP Supply Chain program in 2022, we are focused on establishing our baseline metrics for future engagement impact disclosure. We look forward to sharing the positive climate action impact of Boeing’s supply chain in future reporting years.

Comment
Boeing partners with suppliers to continuously innovate supplied products and services thereby enabling Boeing’s climate impact reduction objectives. The majority of focus is on products in use efficiency and emissions reduction. Other focus areas include efficiencies in transportation and distribution logistics, manufacturing processes and data centers. In addition, we joined CDP’s Supply Chain program in 2022 to build a foundation of supply chain emissions footprint transparency and identify opportunities for supplier climate action collaboration. Finally, we also embed in our supplier Code of Conduct an expectation that suppliers innovate to reduce climate impact and other environmental aspects such as energy efficiency. (https://www.boeingsuppliers.com/principles/Boeing_Supplier_Code_of_Conduct.pdf#8)

Please explain the rationale for selecting this group of customers and scope of engagement

Boeing committed that its commercial airplanes will be capable to fly on 100% SAF by 2030. Long term, we support the commercial aviation industry’s ambition to achieve net-zero carbon emissions for global civil aviation operations by 2050. We are partnering across the industry with the goal to reimagine and ultimately decarbonize commercial aviation in the second half of this century.

Impact of engagement, including measures of success

As we look to create a sustainable future of flight, we are united with our customers and governments around the globe in establishing bold climate change goals and supporting civil aviation’s ambition to achieve net-zero carbon emissions by 2050. Examples of engagements include: • Boeing and Etihad Airways extended their partnership in November 2021, focusing on improving the efficiency of navigation and flight operations. • Boeing and CSIRO, Australia’s national science agency, have launched a five-year, AUD41 million ($29.5 million) research-and-development program to boost manufacturing safety and productivity and to improve aviation sustainability • Boeing provided technical support for SAF flights with two customers on board 737 MAXs and for Rolls-Royce’s 100% SAF flight with its 747 test bed • Boeing provided technical support for SAF flights with two customers on board 737 MAXs and for Rolls-Royce’s 100% SAF flight with its 747 test bed

C12.2

(C12.2) Do your suppliers have to meet climate-related requirements as part of your organization’s purchasing process?

No, but we plan to introduce climate-related requirements within the next two years

Does your organization have a public commitment or position statement to conduct your engagement activities in line with the goals of the Paris Agreement?

Yes

Attach commitment or position statement(s)

See Pg 11.

2022_Boeing_Sustainability_Report.pdf

Describe the process(es) your organization has in place to ensure that your engagement activities are consistent with your overall climate change strategy

After the establishment of a Chief Sustainability Officer and Global Enterprise Sustainability Organization in October 2020, Boeing established a Global Policy Council that oversees climate related policy activity. In 2021, Boeing’s Board revised its committee structure to include a Governance and Public Policy Committee. Through the Board’s Governance & Public Policy Committee, we have enhanced our practices and policies and formalized oversight of public policy, political advocacy and corporate sustainability practices — including matters related to environmental stewardship and climate change, as well as diversity, equity and inclusion. In addition, Boeing established a Global Sustainability Policy & Partnership (GSPP) team consisting of senior leaders from across Boeing to lead our climate policies, build partnerships, and advance progress towards decarbonizing aerospace. Together, the Board, the GPP Committee and senior leadership, are committed to ensuring that our political activities align with the company’s values, business strategies, long-term shareholder interests and long-term strategic imperatives. At Boeing, oversight of political activities starts at the top. Our commitment to sustainability is rooted in our company values and our stakeholders’ expectations. It encompasses our focus on environmental stewardship, social progress and inclusion as well as values-based, transparent governance. The Board works closely with the Executive Vice President (EVP) of Government Operations on the oversight of our engagement in the political process. This includes regular discussions about the company’s public policy priorities; the company’s memberships in and payments to trade associations and other tax-exempt organizations; Boeing Political Action Committee (BPAC) strategy and expenditures; and the company’s network of compliance procedures related to these activities. The GPP Committee leads the oversight activities on these issues and makes appropriate recommendations to the full Board about Boeing’s engagement in the political process. You can review the company’s oversight and internal compliance procedures for political activities here: https://www.boeing.com/resources/boeingdotcom/company/key_orgs/pdf/Summary_of_Political_Activity_PROs.pdf

Primary reason for not engaging in activities that could directly or indirectly influence policy, law, or regulation that may impact the climate

<Not Applicable>

Explain why your organization does not engage in activities that could directly or indirectly influence policy, law, or regulation that may impact the climate

<Not Applicable>

C12.3a

(C12.3a) On what policy, law, or regulation that may impact the climate has your organization been engaging directly with policy makers in the reporting year?

Focus of policy, law, or regulation that may impact the climate

Other, please specify (US rule in alignment with international standards as agreed to by United Nations organization)
Specify the policy, law, or regulation on which your organization is engaging with policy makers
Support development of US rule in alignment with international standards as agreed to by United Nations organization. Details of engagement: Engaged with representatives of US Government (Administration and Congress) advocating for completion of the aircraft CO2 emissions regulation as agreed by the International Civil Aviation Organization (ICAO). We met with government officials and filed a public response in the docket to an EPA Notice of Proposed Rule Making fully articulating this position. Adopt CO2 emission standards for commercial aircraft consistent with International Civil Aviation Organization (ICAO).

**Policy, law, or regulation geographic coverage**
National

**Country/region the policy, law, or regulation applies to**
United States of America

**Your organization’s position on the policy, law, or regulation**
Support with no exceptions

**Description of engagement with policy makers**
We met with government officials in support of this rulemaking.

**Details of exceptions (if applicable) and your organization’s proposed alternative approach to the policy, law or regulation**
<Not Applicable>

**Have you evaluated whether your organization’s engagement is aligned with the goals of the Paris Agreement?**
No, we have not evaluated

**Focus of policy, law, or regulation that may impact the climate**
Low-carbon, non-renewable energy generation

Specify the policy, law, or regulation on which your organization is engaging with policy makers
US Blenders Tax Credit, Renewable Fuel Standards and Sustainable Aviation Fuels, Sustainable Skies Act of 2021, CLEEN and Sustainable Aviation Fuels, Green Aviation Infrastructure

**Policy, law, or regulation geographic coverage**
National

**Country/region the policy, law, or regulation applies to**
United States of America

**Your organization’s position on the policy, law, or regulation**
Support with minor exceptions

**Description of engagement with policy makers**
Engaged with policy makers regarding consideration of sustainable aviation fuels

**Details of exceptions (if applicable) and your organization’s proposed alternative approach to the policy, law or regulation**
Boeing supports the objectives of the Paris Agreement and consider climate change to be an urgent issue. We demonstrate the importance of climate considerations to the company by aligning our governance, strategy, risk management metrics and targets to the TCFD core elements.

**Have you evaluated whether your organization’s engagement is aligned with the goals of the Paris Agreement?**
Yes, we have evaluated, and it is aligned

**Focus of policy, law, or regulation that may impact the climate**
Emissions trading schemes

Specify the policy, law, or regulation on which your organization is engaging with policy makers
Washington State Climate Commitment Act

**Policy, law, or regulation geographic coverage**
Regional

**Country/region the policy, law, or regulation applies to**
United States of America

**Your organization’s position on the policy, law, or regulation**
Neutral

**Description of engagement with policy makers**
Engage with policy makers on need for equitable solutions for energy intensive industries to reduce emissions towards goals while allowing a competitive market and preventing leakage of manufacturing to other jurisdictions, which could increase emissions globally.

**Details of exceptions (if applicable) and your organization’s proposed alternative approach to the policy, law or regulation**
<Not Applicable>

**Have you evaluated whether your organization’s engagement is aligned with the goals of the Paris Agreement?**
Yes, we have evaluated, and it is aligned

**Focus of policy, law, or regulation that may impact the climate**
Climate-related targets

Specify the policy, law, or regulation on which your organization is engaging with policy makers
US EPA rulemaking on HFC phase-down

**Policy, law, or regulation geographic coverage**
National

**Country/region the policy, law, or regulation applies to**
United States of America

**Your organization’s position on the policy, law, or regulation**
CDP
Support with minor exceptions

**Description of engagement with policy makers**
Engage with policy makers on aerospace critical uses, status of alternative technology development and compliance schedules.

**Details of exceptions (if applicable) and your organization’s proposed alternative approach to the policy, law or regulation**
Boeing commented on the need for aerospace critical uses to allow additional time for development of alternative technology development and time to for regulatory certification and approval of the alternatives. Boeing supports the objectives of the Paris Agreement and consider climate change to be an urgent issue. We demonstrate the importance of climate considerations to the company by aligning our governance, strategy, risk management metrics and targets to the TCFD core elements.

**Have you evaluated whether your organization's engagement is aligned with the goals of the Paris Agreement?**
Yes, we have evaluated, and it is aligned

---

**Focus of policy, law, or regulation that may impact the climate**
- Adaptation and/or resilience to climate change
- Climate-related targets
- Electricity grid access for renewables
- Mandatory climate-related reporting
- Renewable energy generation

**Specify the policy, law, or regulation on which your organization is engaging with policy makers**
- Biden Administration Climate Agenda

**Policy, law, or regulation geographic coverage**
- National

**Country/region the policy, law, or regulation applies to**
- United States of America

**Your organization's position on the policy, law, or regulation**
- Neutral

**Description of engagement with policy makers**
Engage with policy makers on numerous Biden Administration climate related policies including: • Responding to climate change impacts (resiliency) • Reducing risk and emissions (mitigation) • Expanding renewable energy. Engagements included: • Supporting low-emissions transportation • Consideration of climate change & risks in agency decisions. Engagements include advancing policies in support of sustainable aviation fuels initiatives such as the First Movers Coalition and Sustainable Aviation Fuels Buyers Alliance.

**Details of exceptions (if applicable) and your organization’s proposed alternative approach to the policy, law or regulation**
<Not Applicable>

**Have you evaluated whether your organization's engagement is aligned with the goals of the Paris Agreement?**
Yes, we have evaluated, and it is aligned

---

(C12.3b) Provide details of the trade associations your organization engages with which are likely to take a position on any policy, law or regulation that may impact the climate.

**Trade association**
- Business Roundtable

**Is your organization's position on climate change consistent with theirs?**
- Mixed

**Has your organization influenced, or is your organization attempting to influence their position?**
We are attempting to influence them to change their position

**State the trade association’s position on climate change, explain where your organization’s position differs, and how you are attempting to influence their position (if applicable)**
The Business Roundtable states that "Addressing climate change and its impacts demands a robust, coordinated effort with a sound policy portfolio. Business Roundtable CEOs are calling for a well-designed market-based mechanism and other supporting policies to provide certainty and unleash innovation to lift America toward a cleaner, brighter future." For more information, see: https://www.businessroundtable.org/climate Boeing supports the objectives of the Paris Agreement and consider climate change to be an urgent issue. Boeing maintains memberships in numerous organizations and engage on a diverse set of topics that relate to our business, our supply chain, our customers, and our communities overall. We welcome debate and discussion on topics that are relevant to us and our stakeholders and look for the opportunity to provide our perspectives on many policy topics. The Boeing Company publicly discloses our memberships in trade associations at https://www.boeing.com/resources/boeingdotcom/company/key_orgs/pdf/Trade_Association_Disclosure_2021.pdf.

**Funding figure your organization provided to this trade association in the reporting year, if applicable (currency as selected in C0.4) (optional)**
<Not Applicable>

**Describe the aim of your organization’s funding**
No, we have not evaluated

**Have you evaluated whether your organization's engagement with this trade association is aligned with the goals of the Paris Agreement?**
No, we have not evaluated

---

**Trade association**
- International Air Transport Association

**Is your organization's position on climate change consistent with theirs?**
- Consistent

**Has your organization influenced, or is your organization attempting to influence their position?**
We publicly promote their current position
State the trade association’s position on climate change, explain where your organization’s position differs, and how you are attempting to influence their position (if applicable)

IATA's commitment to climate is as follows: "Fly Net Zero is the commitment of airlines to achieve net zero carbon by 2050. At the 77th IATA Annual General Meeting in Boston, USA, on 4 October 2021, a resolution was passed by IATA member airlines committing them to achieving net-zero carbon emissions from their operations by 2050. This pledge brings air transport in line with the objectives of the Paris agreement to limit global warming to 1.5°C. To succeed, it will require the coordinated efforts of the aviation, services and manufacturing sectors (airlines, airports, air navigation service providers, manufacturers) and significant government support. Read the press release: IATA members' AGM resolution on Net Zero 2050." For more information, see: https://www.iata.org/en/program/environment/netzero/
Boeing supports the objectives of the Paris Agreement and consider climate change to be an urgent issue. In October 2021, Boeing supported the commercial aviation industry commitment to achieve net zero carbon emissions by 2050. Boeing maintains memberships in numerous organizations and engage on a diverse set of topics that relate to our business, our supply chain, our customers, and our communities overall. We welcome debate and discussion on topics that are relevant to us and our stakeholders and look for the opportunity to provide our perspectives on many policy topics. The Boeing Company publicly discloses our memberships in trade associations at https://www.boeing.com/resources/boeingdotcom/company/key_orgs/pdf/Trade_Association_Disclosure_2021.pdf.

Funding figure your organization provided to this trade association in the reporting year, if applicable (currency as selected in C0.4) (optional)

Describe the aim of your organization’s funding

Have you evaluated whether your organization’s engagement with this trade association is aligned with the goals of the Paris Agreement?

Yes, we have evaluated, and it is aligned

Trade association

US Chamber of Commerce

Is your organization’s position on climate change consistent with theirs?

Mixed

Has your organization influenced, or is your organization attempting to influence their position?

We are attempting to influence them to change their position

State the trade association’s position on climate change, explain where your organization’s position differs, and how you are attempting to influence their position (if applicable)

The Chamber’s position on climate is stated as follows: “Combating climate change requires citizens, governments, and businesses to work together. Inaction is simply not an option. American businesses play a vital role in creating innovative solutions and reducing greenhouse gases to protect our planet. A challenge of this magnitude requires collaboration, not confrontation, to advance the best ideas and policies. Together, we can forge solutions that improve our environment and grow our economy—leaving the world better for generations to come.” For more information, see: https://www.uschamber.com/climate-change/Boeing supports the objectives of the Paris Agreement and consider climate change to be an urgent issue. Boeing maintains memberships in numerous organizations and engage on a diverse set of topics that relate to our business, our supply chain, our customers, and our communities overall. Describe the aim of your organization’s funding

Have you evaluated whether your organization’s engagement with this trade association is aligned with the goals of the Paris Agreement?

No, we have not evaluated

Trade association

Other, please specify (Aerospace Industries Association (AIA))

Is your organization’s position on climate change consistent with theirs?

Mixed

Has your organization influenced, or is your organization attempting to influence their position?

We are attempting to influence them to change their position

State the trade association’s position on climate change, explain where your organization’s position differs, and how you are attempting to influence their position (if applicable)

AIA's Principles to Build on Aviation Manufacturers' Climate Commitments can be found at https://www.aia-aerospace.org/issues/environment/Boeing supports the
State the trade association’s position on climate change, explain where your organization’s position differs, and how you are attempting to influence their position (if applicable)

Airlines for Europe states that: “Europe’s airlines have committed to decarbonize air transport and accelerate their efforts to make Europe the world’s first carbon neutral continent by 2050 through the reduction of carbon emissions in absolute terms, and through CO2 mitigation. [...] There is no panacea for reducing greenhouse gas emissions; the solutions will vary with geography, economics, and demand. The Destination 2050 roadmap shows a decarbonization path that combines new technologies, improved operations, sustainable aviation fuels and smart economic measures in achieving net zero CO2 emissions from European aviation by 2050. A4E members want to be part of the fight against climate change. It is a challenge we face head-on, and one we will only achieve through integrated, cross-sector efforts across policy fields: transport, climate, energy and research. The solution is not to fly less, but to fly more efficiently and more sustainably. A4E airlines look forward to this future.”

Funding figure your organization provided to this trade association in the reporting year, if applicable (currency as selected in C0.4) (optional)

Describe the aim of your organization’s funding

<Not Applicable>

Have you evaluated whether your organization’s engagement with this trade association is aligned with the goals of the Paris Agreement?

No, we have not evaluated

Trade association

Other, please specify (Air Transport Aviation Group (ATAG))

Is your organization’s position on climate change consistent with theirs?

Consistent

Has your organization influenced, or is your organization attempting to influence their position?

We publicly promote our current position

State the trade association’s position on climate change, explain where your organization’s position differs, and how you are attempting to influence their position (if applicable)

The Air Transport Aviation Group (ATAG) states: “Scientific consensus shows that the Paris Agreement 1.5°C goal would greatly reduce the severity of climate change damage. [...] The collective air transport sector raises its ambition with a new long-term climate commitment. Global civil aviation operations will achieve net-zero carbon emissions by 2050, supported by accelerated efficiency measures, energy transition and innovation across the aviation sector and in partnership with governments around the world. [...] The goal will be underpinned by a commitment to joint and cooperative action between all stakeholders. Waypoint 2050 outlines a number of key elements to achieve the decarbonisation of air transport, including: 1. Increasing use of sustainable aviation fuels (SAF) and a transition away from fossil fuels by mid-century as part of a wider aviation energy shift including low-carbon electricity and green hydrogen. 2. Research, development and deployment of evolutionary and revolutionary airframe and propulsion systems, including the introduction of electric and / or hydrogen powered aircraft. 3. Continued improvements in efficiency of operations and infrastructure across the system, including at airports and by air navigation service providers. 4. Investment in high-quality carbon offsets in the near-term and carbon removal opportunities to address residual CO2 emissions in the longer-term. In this regard, the industry reaffirms its full support for the International Civil Aviation Organization (ICAO) Carbon Offsetting and Reduction Scheme for International Aviation (CORSIA) as an effective transitional measure to stabilise net emissions from international aviation.” For more info, see: https://aviationbenefits.org/media/167501/atag-net-zero-2050-declaration.pdf

Funding figure your organization provided to this trade association in the reporting year, if applicable (currency as selected in C0.4) (optional)

Describe the aim of your organization’s funding

<Not Applicable>

Have you evaluated whether your organization’s engagement with this trade association is aligned with the goals of the Paris Agreement?

Yes, we have evaluated, and it is aligned
(C12.3c) Provide details of the funding you provided to other organizations in the reporting year whose activities could influence policy, law, or regulation that may impact the climate.

**Type of organization**
Trust or foundation

**State the organization to which you provided funding**
The Trust for Public Land (TPL)

**Funding figure your organization provided to this organization in the reporting year (currency as selected in C0.4)**
163125

**Describe the aim of this funding and how it could influence policy, law or regulation that may impact the climate**

TPL states: “Climate: Communities need real-world solutions to the climate crisis. We can help. In our nearly five decades of helping communities, we've developed time-tested, cost-effective solutions for using parks and public land to counter climate challenges. •We've provided 100 cities, home to 25 million people, with climate-smart insight and tools to identify where parks and public land would have the greatest impact. •We've implemented hundreds of on-the-ground projects to reduce urban heat, manage intense rainfall, and protect natural carbon stocks. •We've protected 3.6 million acres of land, including 700,000 acres of floodplain and coasts, that store 141 million tons of carbon […] •And we've engaged voters and decision makers to deliver nature-based climate action, driving policy innovation and billions of dollars in state and local conservation funding that more than double our direct impact.” See: https://www.tpl.org/our-commitments/climate The aim of Boeing’s philanthropic funding is to help to advance TPL’s initiatives in alignment with Boeing’s Global Engagement pillars: Our Commitment to Our Future, Our Heroes, and Our Homes, as amplified by our employees and our partners. Boeing partners with The Trust for Public Lands on a wide variety of environmental conservation, restoration, educational activities including a focus on water quality and urban greenspace. In 2021, we partnered on a project that involved preparing future STEM leaders, striving towards racial equity by supporting underserved communities, and working to improve the environment around us. In addition, given a shared passion for the environment, Boeing partnered with TPL in 2021 to recognize outstanding environmental volunteers in Arizona, California, Oregon, and Washington. Working hand in hand with our community partners, Boeing lends our expertise and resources to address pressing needs in communities across the globe. In our pursuit of a better world, we leverage our partners’ collective knowledge, creativity and resources in order to achieve greater impact than any of us is able to accomplish alone. We are partners in change, moving our communities and our society forward, together. Boeing’s goal is to strengthen the communities where our employees live and work. By applying sustainable solutions to local challenges, such as environmental restoration efforts in the Puget Sound region—Boeing can more quickly and effectively respond to the needs of local communities.

**Have you evaluated whether this funding is aligned with the goals of the Paris Agreement?**
No, we have not evaluated

---

**Type of organization**
Non-Governmental Organization (NGO) or charitable organization

**State the organization to which you provided funding**
The Nature Conservancy (TNC)

**Funding figure your organization provided to this organization in the reporting year (currency as selected in C0.4)**
404453

**Describe the aim of this funding and how it could influence policy, law or regulation that may impact the climate**

“Climate: Communities need real-world solutions to the climate crisis. We can help. In our nearly five decades of helping communities, we've developed time-tested, cost-effective solutions for using parks and public land to counter climate challenges: 1. Carbon Emissions: Reduce or store 3 gigatons of CO2 emissions yearly[...]. 2. Helping People: Benefit 100 million people[...]. 3. Our Ocean: Conserve nearly 10 billion acres of oceans[...]. 4. Healthy Lands: Conserve 1.6 billion acres of land[...]. 5. Freshwater: Conserve more than 620,000 miles of rivers[...]. 6. Local Leaders: Support 45 million local stewards[...].” See: https://www.nature.org/en-us/what-we-do/our-priorities/ The aim of Boeing’s philanthropic funding is to help to advance TNC’s initiatives in alignment with Boeing’s Global Engagement pillars: Our Commitment to Our Future, Our Heroes, and Our Homes, amplified by our employees and our partners. Boeing partners with The Nature Conservancy on a wide variety of environmental conservation and restoration activities including forest preservation and restoration, floodplain protection, coastal restoration and water quality issues to protect salmon and orcas. Boeing is committed to making positive sustainability impacts across our business and through partnerships with environmental organizations around the world. Working hand in hand with our community partners, Boeing lends our expertise and resources to address pressing needs in communities across the globe. In our pursuit of a better world, we leverage our partners’ collective knowledge, creativity and resources in order to achieve greater impact than any of us is able to accomplish alone. We are partners in change, moving our communities and our society forward, together. Boeing’s goal is to strengthen the communities where our employees live and work. By applying sustainable solutions to local challenges, such as environmental restoration efforts in the Puget Sound region—Boeing can more quickly and effectively respond to the needs of local communities.

**Have you evaluated whether this funding is aligned with the goals of the Paris Agreement?**
No, we have not evaluated

SC. Supply chain module

SC0.0

(SC0.0) If you would like to do so, please provide a separate introduction to this module.

As a leading global aerospace company, Boeing develops, manufactures and services commercial airplanes, defense products and space systems for customers in more than 150 countries. As a top U.S. exporter, the company leverages the talent of a global supplier base to advance economic opportunity, sustainability and community impact. Boeing’s diverse team is committed to innovating for the future and living the company’s core values of safety, quality and integrity.

SC0.1

(SC0.1) What is your company’s annual revenue for the stated reporting period?

<table>
<thead>
<tr>
<th>Annual Revenue</th>
</tr>
</thead>
<tbody>
<tr>
<td>6226000000</td>
</tr>
</tbody>
</table>

SC1.1

(SC1.1) Allocate your emissions to your customers listed below according to the goods or services you have sold them in this reporting period.

SC1.2

(SC1.2) Where published information has been used in completing SC1.1, please provide a reference(s).

SC1.3

(SC1.3) What are the challenges in allocating emissions to different customers, and what would help you to overcome these challenges?

<table>
<thead>
<tr>
<th>Allocation challenges</th>
<th>Please explain what would help you overcome these challenges</th>
</tr>
</thead>
<tbody>
<tr>
<td>Diversity of product lines makes accurately accounting for each product/product line cost ineffective</td>
<td>Due to the diversity of our products, the proprietary nature of our business, and the classified status of many of our programs, we are still looking for a better allocation methodology for our customers. We are open to working more closely with our customers and the aerospace industry to develop a common approach for allocating emissions to customers. We disclose our GHG inventory at the company and country level through CDP and the Boeing Environment report.</td>
</tr>
</tbody>
</table>

SC1.4

(SC1.4) Do you plan to develop your capabilities to allocate emissions to your customers in the future?

Yes

SC1.4a

(SC1.4a) Describe how you plan to develop your capabilities.

Boeing will continue to develop means for calculating customer specific information. We would welcome discussions with our customers to help develop standard approaches for such calculations that meet their needs.

We are exploring different options of allocation calculations

SC2.1

(SC2.1) Please propose any mutually beneficial climate-related projects you could collaborate on with specific CDP Supply Chain members.
SC2.2

(SC2.2) Have requests or initiatives by CDP Supply Chain members prompted your organization to take organizational-level emissions reduction initiatives?

No

SC4.1

(SC4.1) Are you providing product level data for your organization's goods or services?

No, I am not providing data

Submit your response

In which language are you submitting your response?

English

Please confirm how your response should be handled by CDP
